The test: targeted vs. untargeted, same stores, same days

10 days
14–23 August

30 stores
B.TECH locations

2 campaigns
in-house, A/B test

TARGETED CAMPAIGN

Females under 35

Targeting filter switched on

CONTROL CAMPAIGN

Everyone

No targeting

Targeting barely moved the audience

+0.9 pt

women's share of plays

40.8% → 41.7%

+0.6 pt

women's share of viewers

39.2% → 39.9%

58%

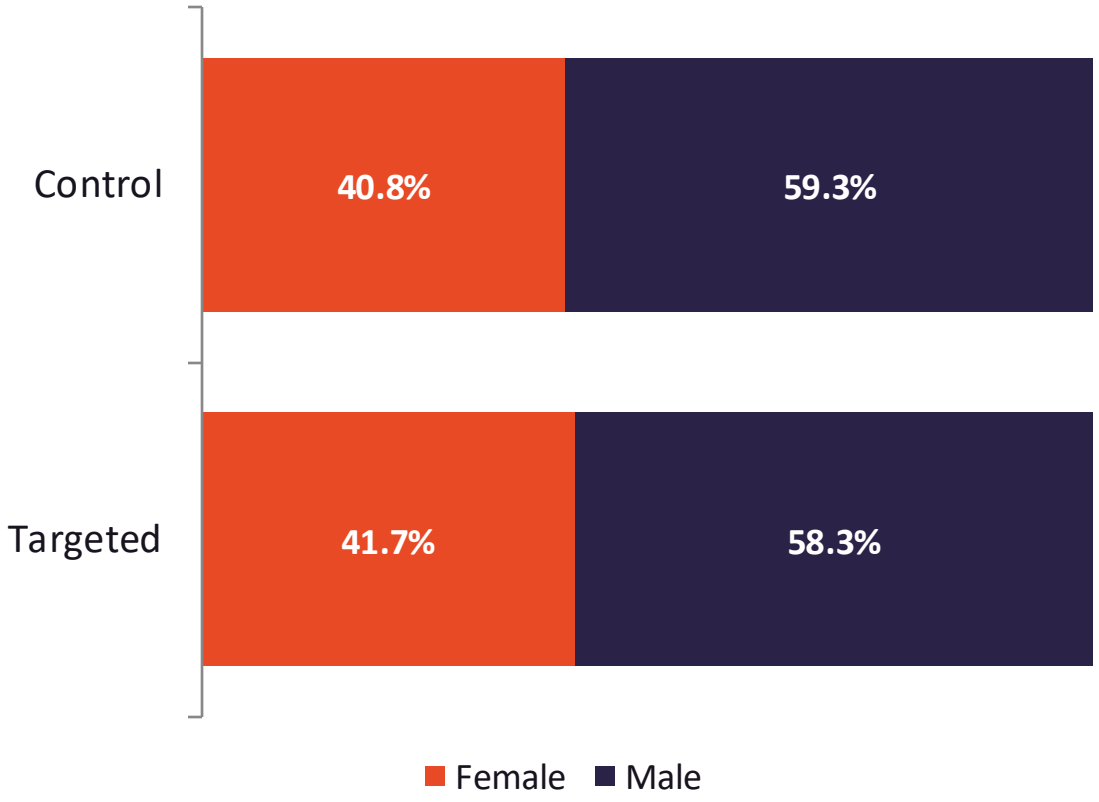

of targeted plays still reached men

vs 59% in the control

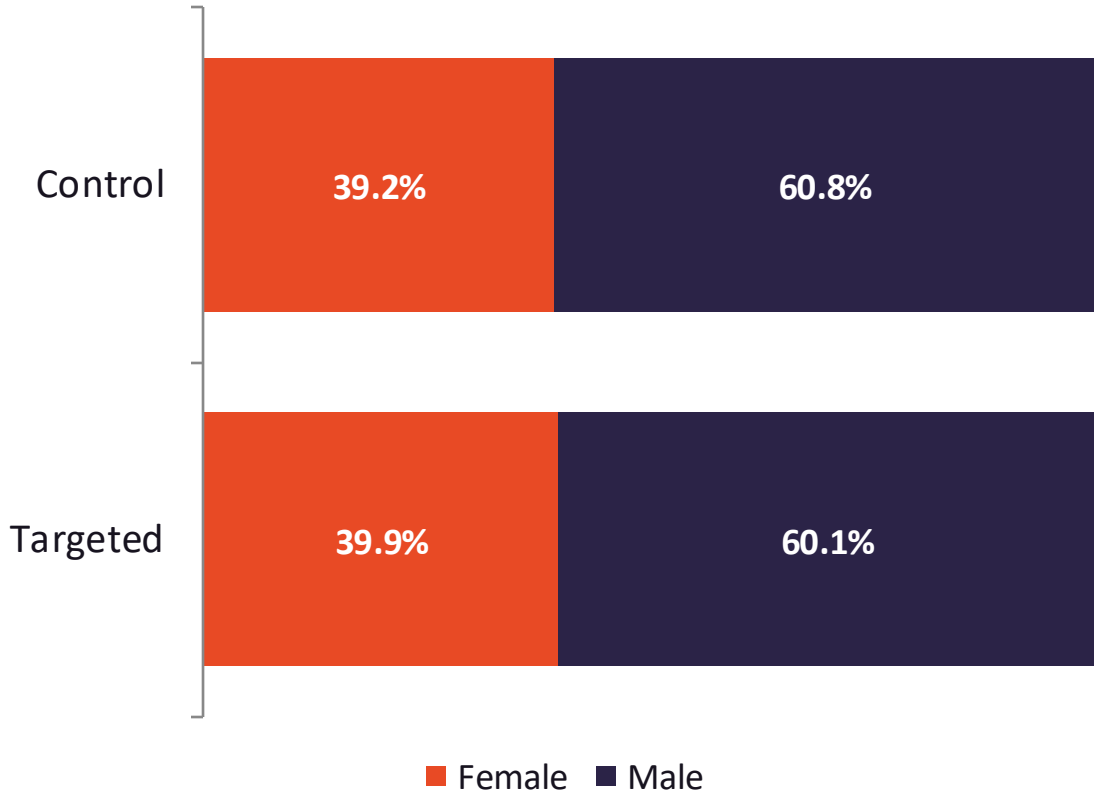

A working female-under-35 filter should lift women's share far more than one point.

Women were about 40% of the audience in both campaigns

Share of plays

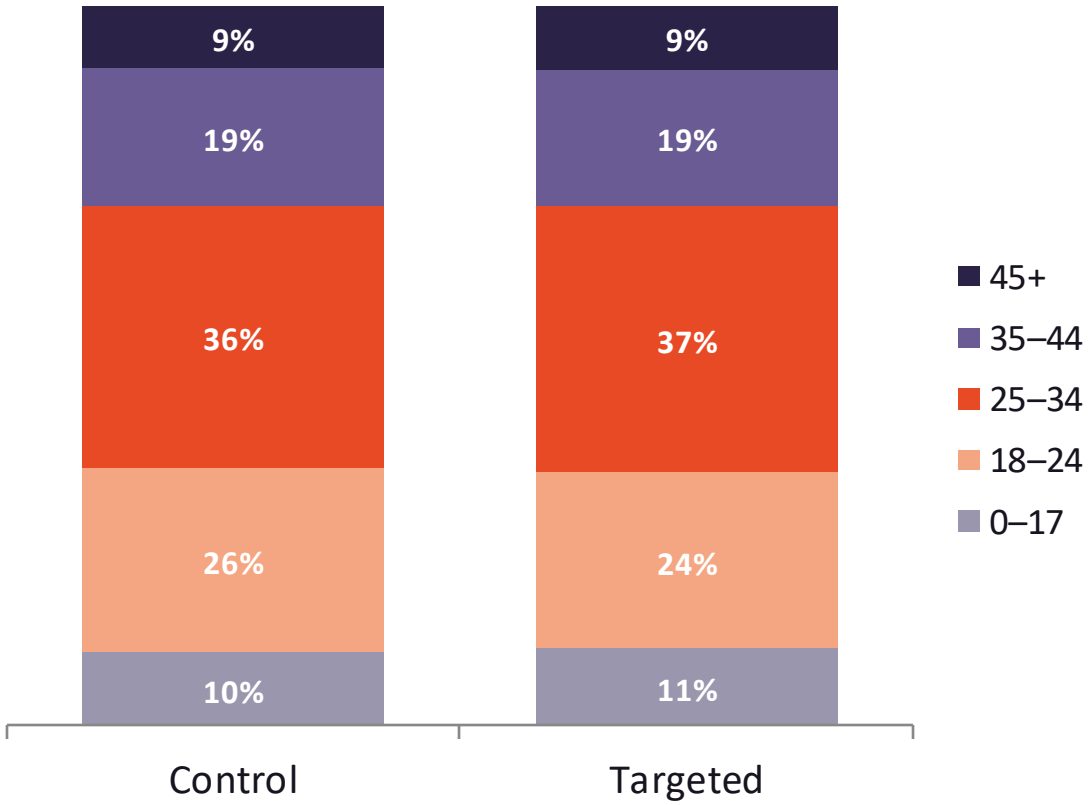

Share of viewers

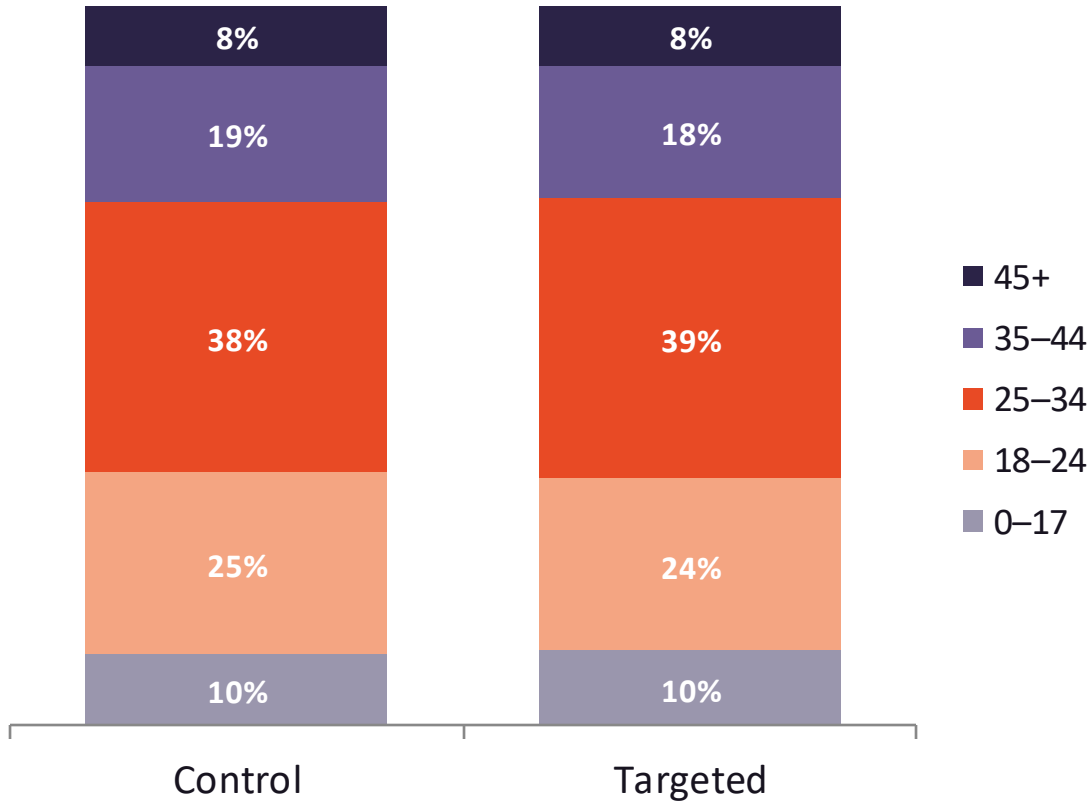

Under-35s stayed about 72–73% of the audience in both

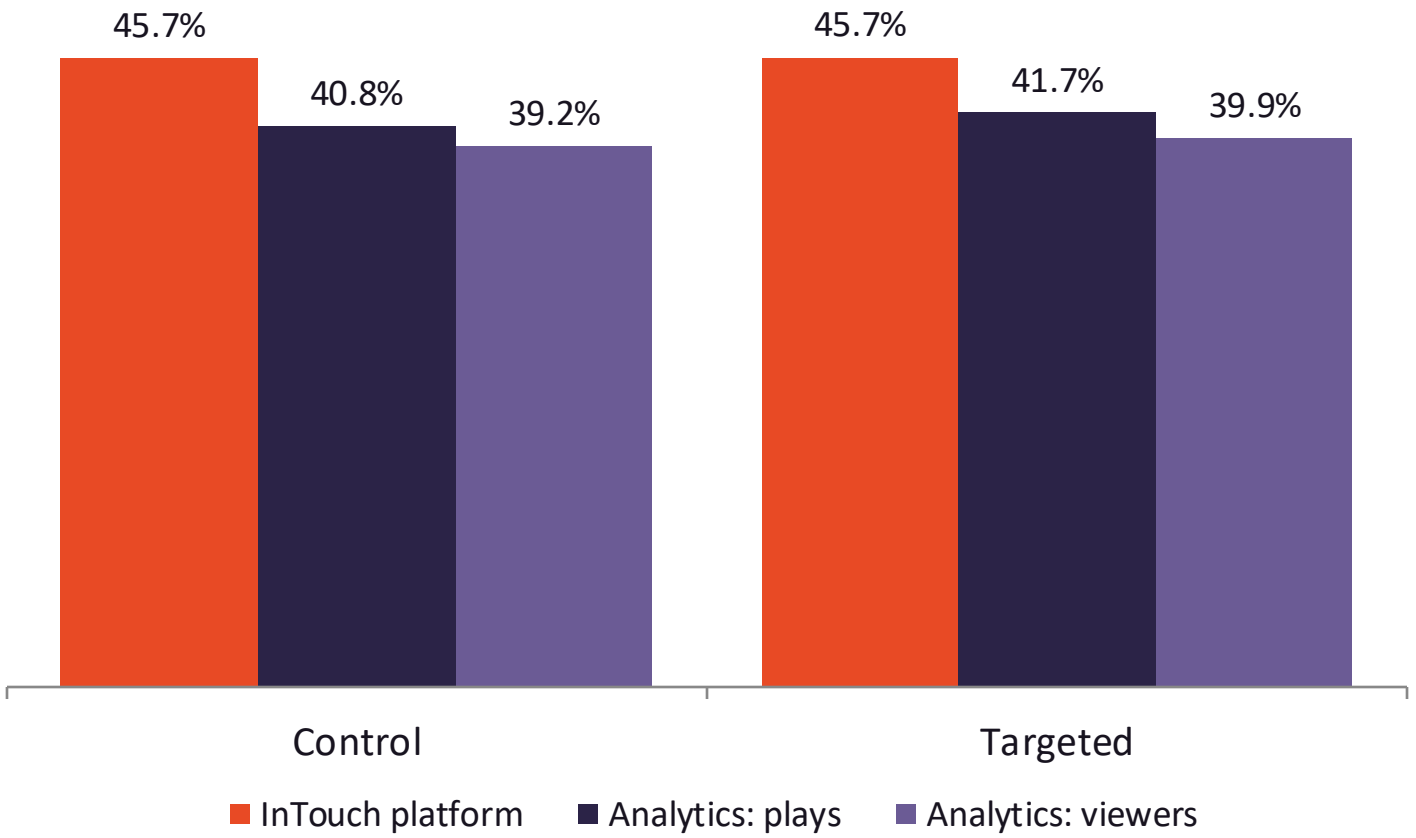

Share of plays

Share of viewers

InTouch reports 46% women; in-store analytics saw about 40%

45.70 vs 45.69

InTouch's own gender view is identical in both campaigns.

~5 pts apart

Platform shows more women than in-store analytics. Which is right?

Four possible reasons to check with InTouch

Filter may not have run
Confirm the rule was live on every screen and play.

Platform shows plan, not reality
Identical readings across campaigns point to estimates.

Small test
One campaign pair, 10 days, 30 stores.

Needs a viewer in view
With ~4 in 10 viewers women, a filter can only tilt plays when one is detected.

Hypotheses, not findings — each needs confirming.

Four steps before we sell targeting again

Hold the claim
Don't present demographic targeting as proven to advertisers yet.

Trace the rule with InTouch
Confirm the filter was live and how plays are chosen.

Re-test bigger
More stores and days. Agree the success bar up front.

One source of truth
Reconcile InTouch and analytics demographics.

Bottom line: targeting is not proven yet

1

What we saw

Women's share moved under 1 point; age mix stayed the same.

2

What we don't know

Why — the rule, the platform data, or the test size.

3

What's next

Trace with InTouch, then re-test with a clear success bar.
