Executive summary

Demand is not the problem. Converting it, and tracking it properly, is.

55,845

unique leads (79 duplicate rows removed)

1.7%

of leads reach a signed contract

EGP 7.1B

confirmed deal value (868 deals)

53 days

median from lead creation to contract

1

More leads, weaker yield

Leads doubled in 2023 (29.2K vs 14.2K) but 90-day conversion fell from 1.6% to 1.0%.

2

Channel quality differs ~20x

Referral, personal and ambassador leads convert at 13.7% vs 0.7% for Facebook, and close 2.4x faster.

3

Money is waiting in the pipeline

About EGP 6.1B is open in the pipeline, including 189 reserved units (EGP 1.45B) not yet contracted.

Conversion = leads with at least one contracted deal / unique leads. Currency is not stated in the data; EGP is assumed.

How the numbers were built

Clear definitions first, because the data has several ways to say "sale"

Definitions

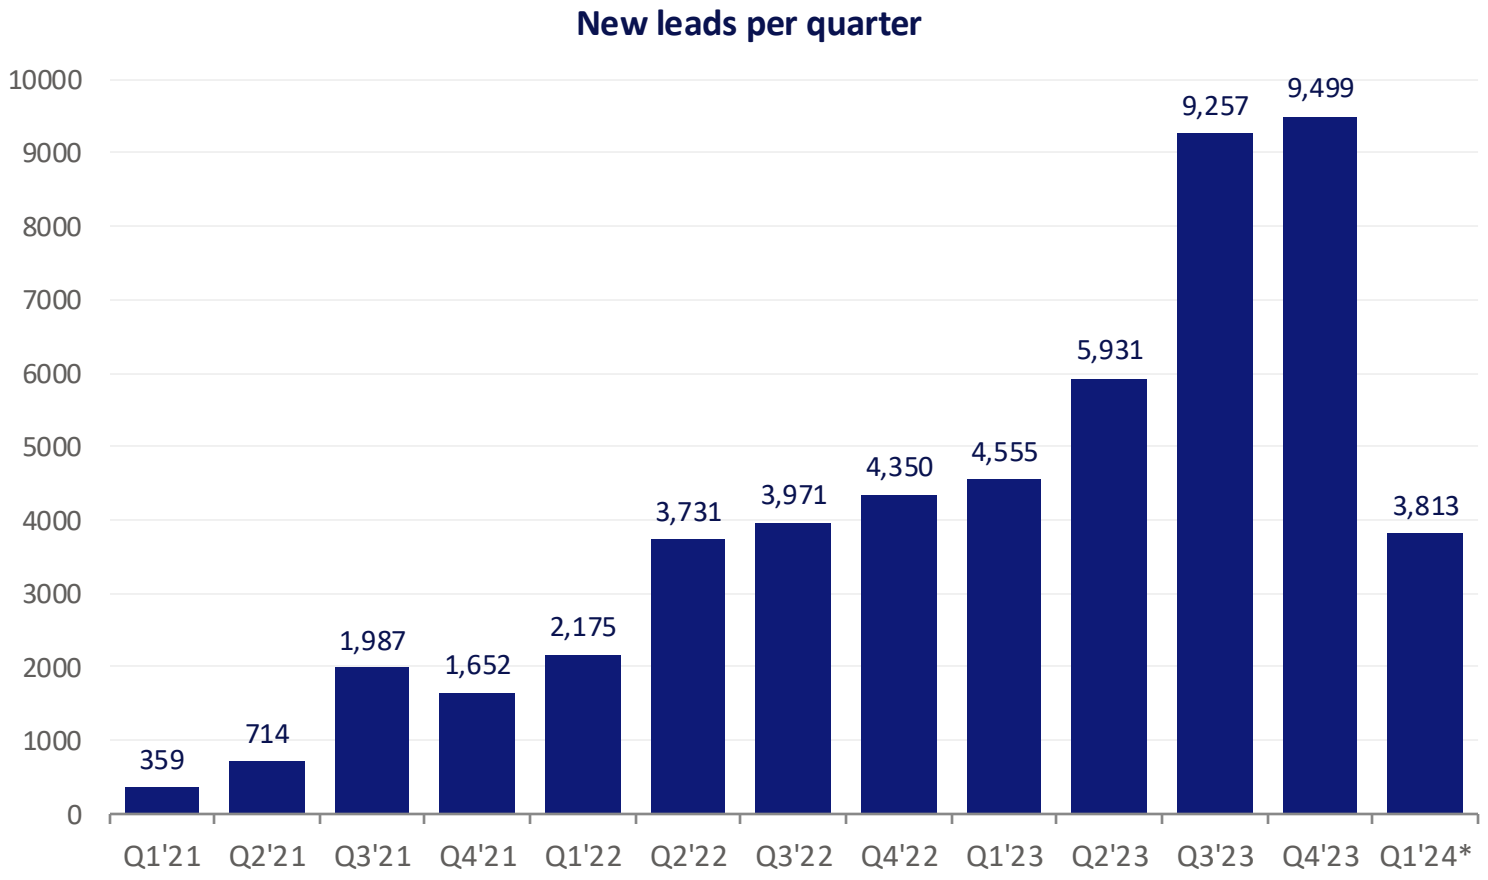

Lead	A unique row in Leads. 55,924 rows contained 79 exact duplicates, leaving 55,845.
Sale record	A row in Sales (2,194 rows, 1,229 unique leads).
Reserved	Sale record with a reservation date (1,454 records, 949 leads).
Contracted (closed)	Sale record with a contraction date (1,340 records, 940 leads). Used for counts, conversion and time to sale.
Value-confirmed	Sale record with an actual value (868 deals). Used for all money figures.
Sales agent	user_id on the lead (its current owner), since Sales has no agent field.

Read with care

- Actual value is missing for 40% of contracted deals and is never recorded before Q2 2022.
- The data ends 8 to 10 Feb 2024, so Q1 2024 is partial and recent leads are still maturing.
- Budget is filled on only 0.7% of leads.
- Currency is not stated; EGP is assumed.

Lead volume has doubled in two years

Quarterly leads grew from about 2K to about 9.5K, and Facebook supplies 58% of them

2.1x

2023 leads (29,242) vs 2022 (14,227)

58%

of all leads come from Facebook and Instagram, up to 62% of 2023 leads

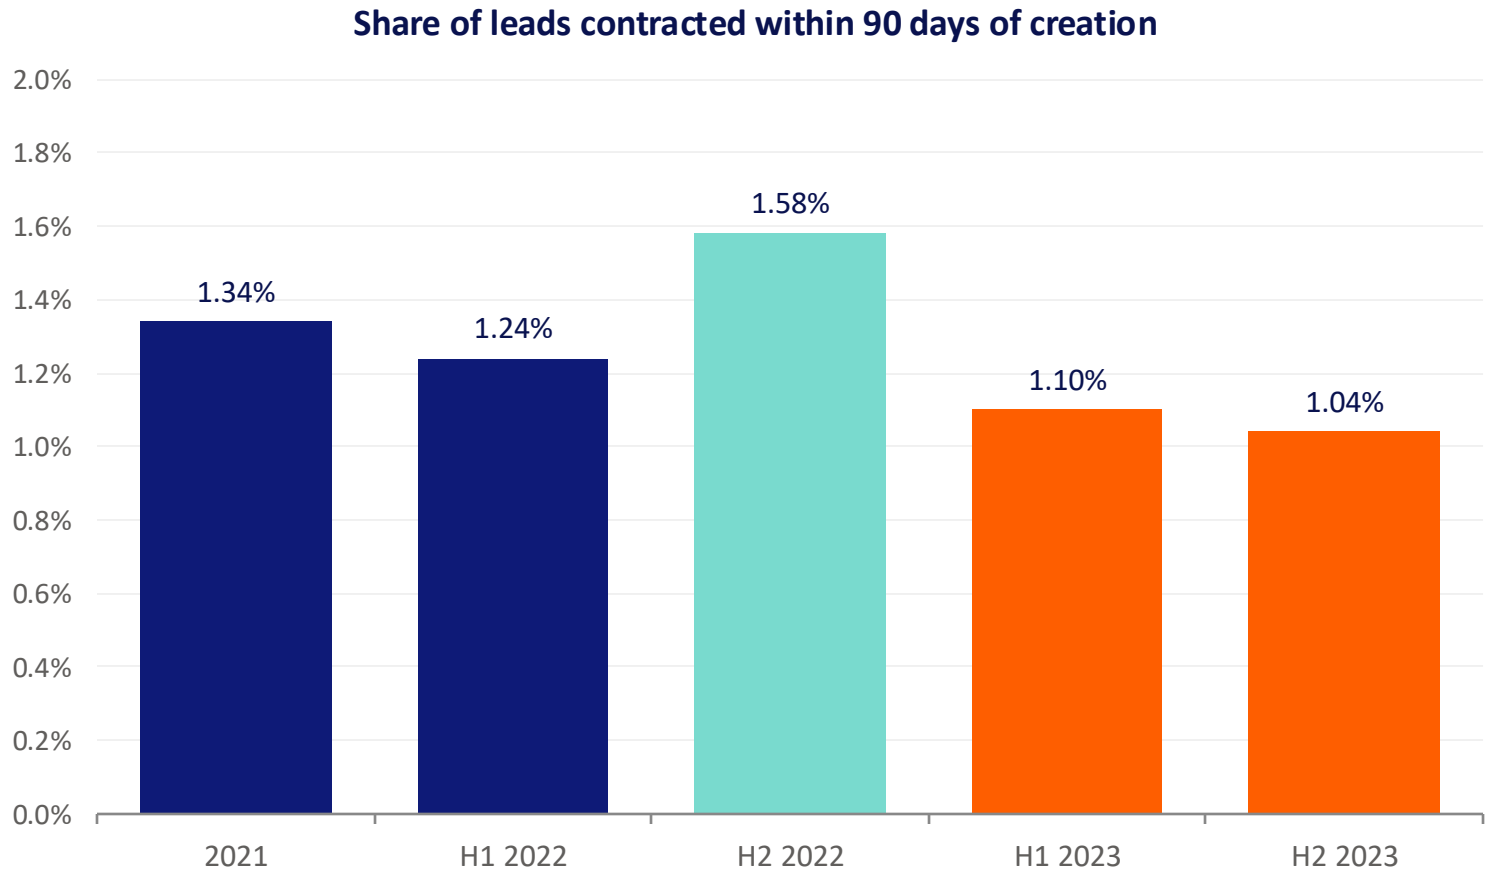

~9.4K

leads per quarter in H2 2023, over 4x the Q1 2022 pace

* Q1 2024 is partial (data ends 10 Feb 2024).

More leads, but each lead is worth less

At the same maturity, 2023 leads convert about a third worse than late-2022 leads

What changed

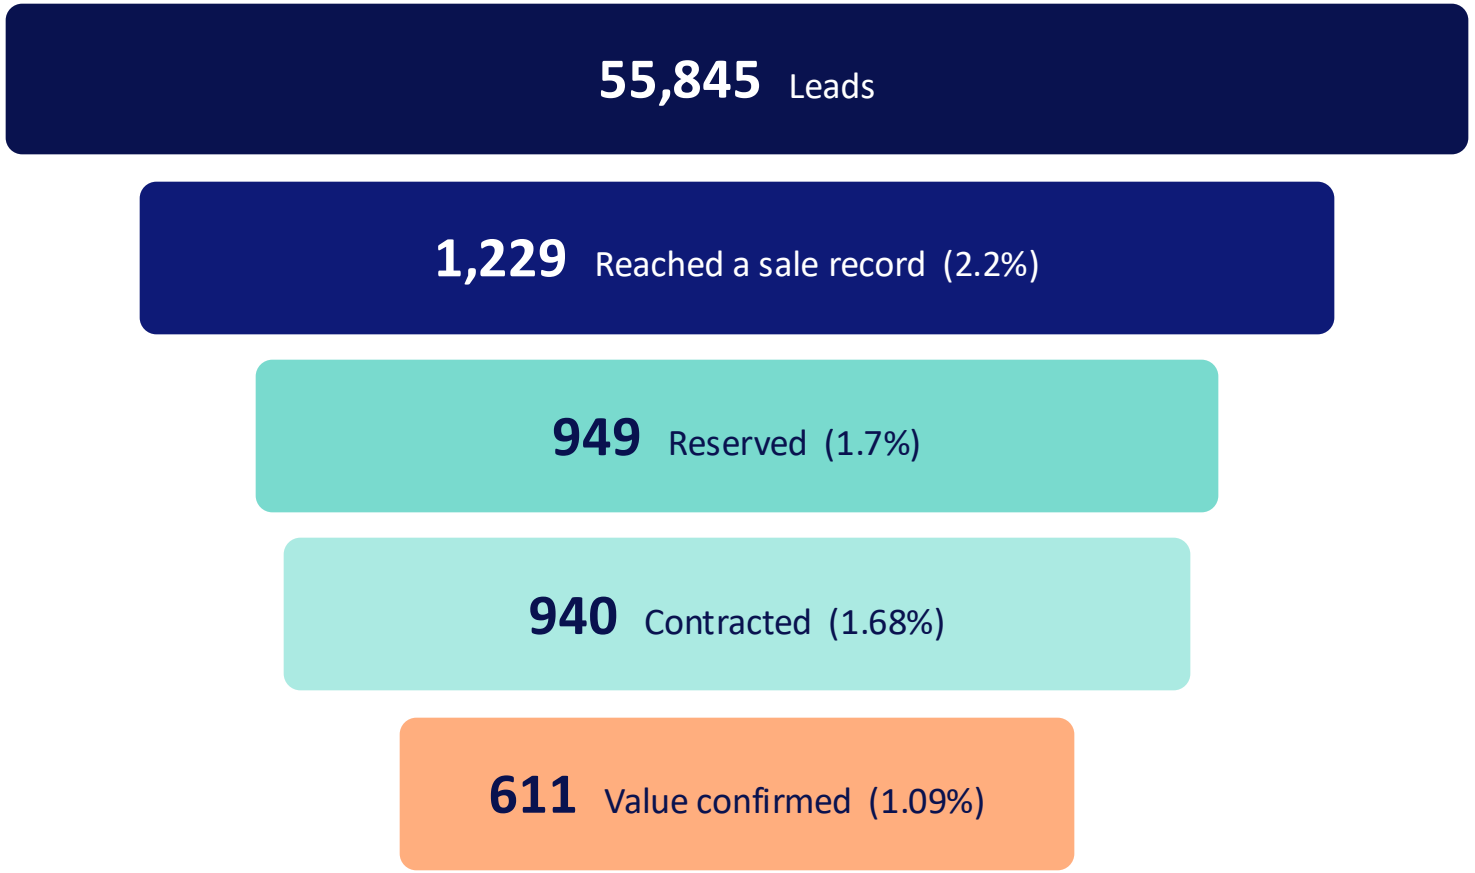

▼ -34% yield, H2 2022 to H2 2023

- Volume grew faster than the team could work it: 9,925 leads still wait for a first contact.
- The mix moved toward Facebook, the lowest-yield channel.
- Only leads with a full 90-day window are counted, so recent leads are not penalised.

Cohorts include only leads created at least 90 days before 8 Feb 2024; H2 2023 therefore covers leads up to early Nov 2023 (13,300 leads).

Only 1.7% of leads reach a contract

Almost all leakage happens before a sale record exists; reserved units close quickly

Bars are not to scale

97.8%

of leads never reach a sale record

9 days

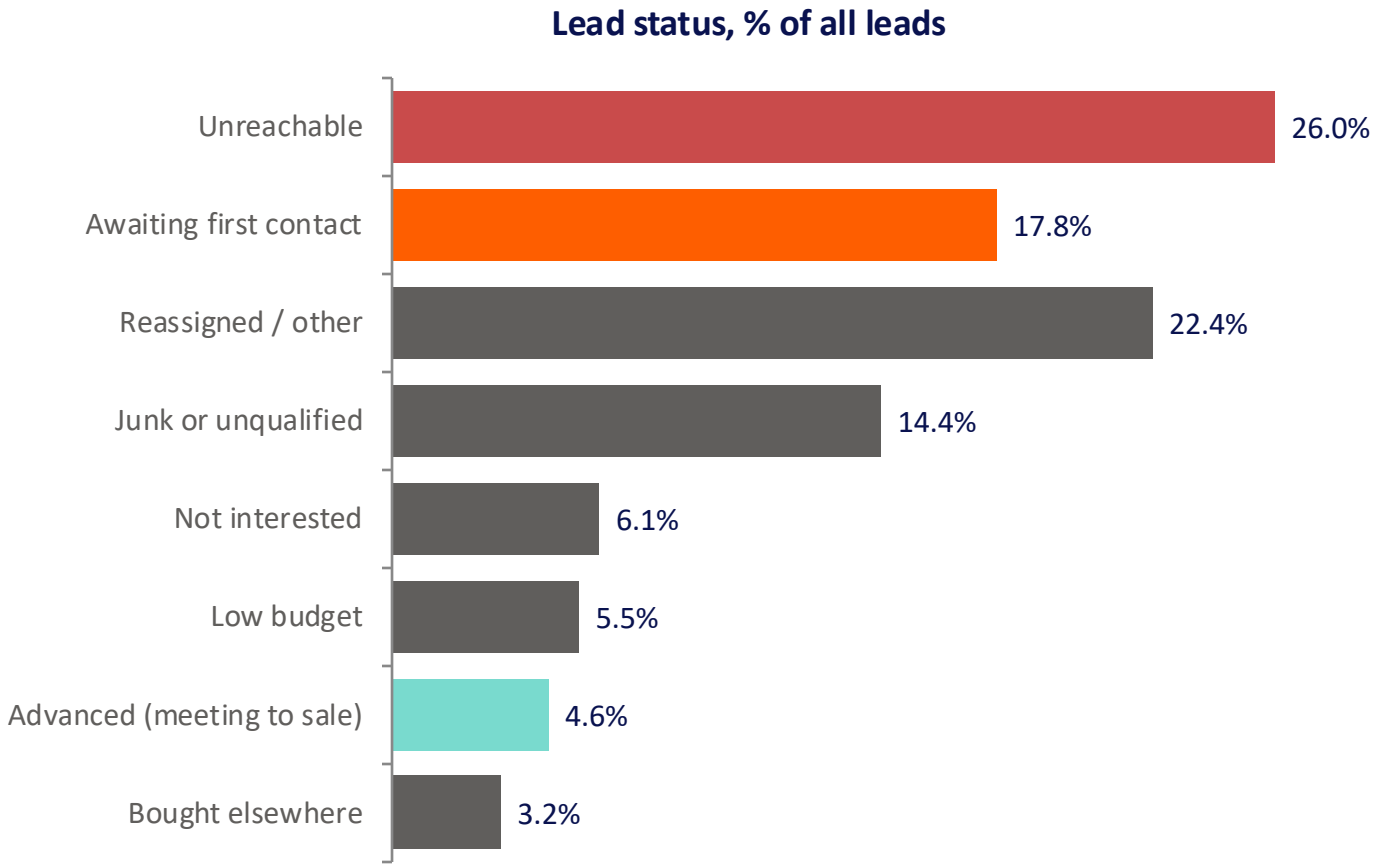

median from reservation to contract, versus 31 days from lead to reservation

EGP 1.45B

189 reserved units are still not contracted (64 reserved since Aug 2023)

Over half of all leads never get a real conversation

26% are unreachable, 18% are still waiting for a first call, and 14% are junk

9,925

leads wait for a first contact; the median one is 322 days old

846

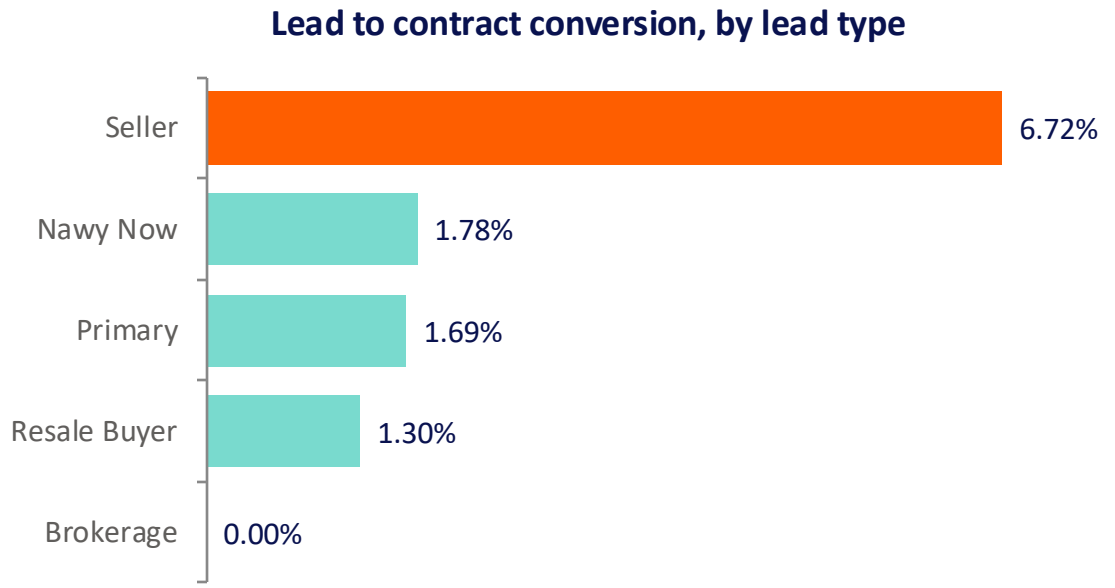

recruitment ("hiring") leads sit in the sales pool; none converted and 826 still show "needs to be contacted"

Reassigned / other covers Reassigned Handover, Future contact, Follow up and similar statuses.

Primary leads dominate; Seller leads convert 4x better

Lead type mix sets the average, and Brokerage leads produce no deals at all

Lead type	Leads	Share	Conversion
Primary	53,322	95.5%	1.69%
Resale Buyer	1,078	1.9%	1.30%
Nawy Now	955	1.7%	1.78%
Brokerage	312	0.6%	**0.00%**
Seller	134	0.2%	**6.72%**
Commercial Buyer	32	0.1%	0.00%
Other (4 types)	12	<0.1%	8.3%*

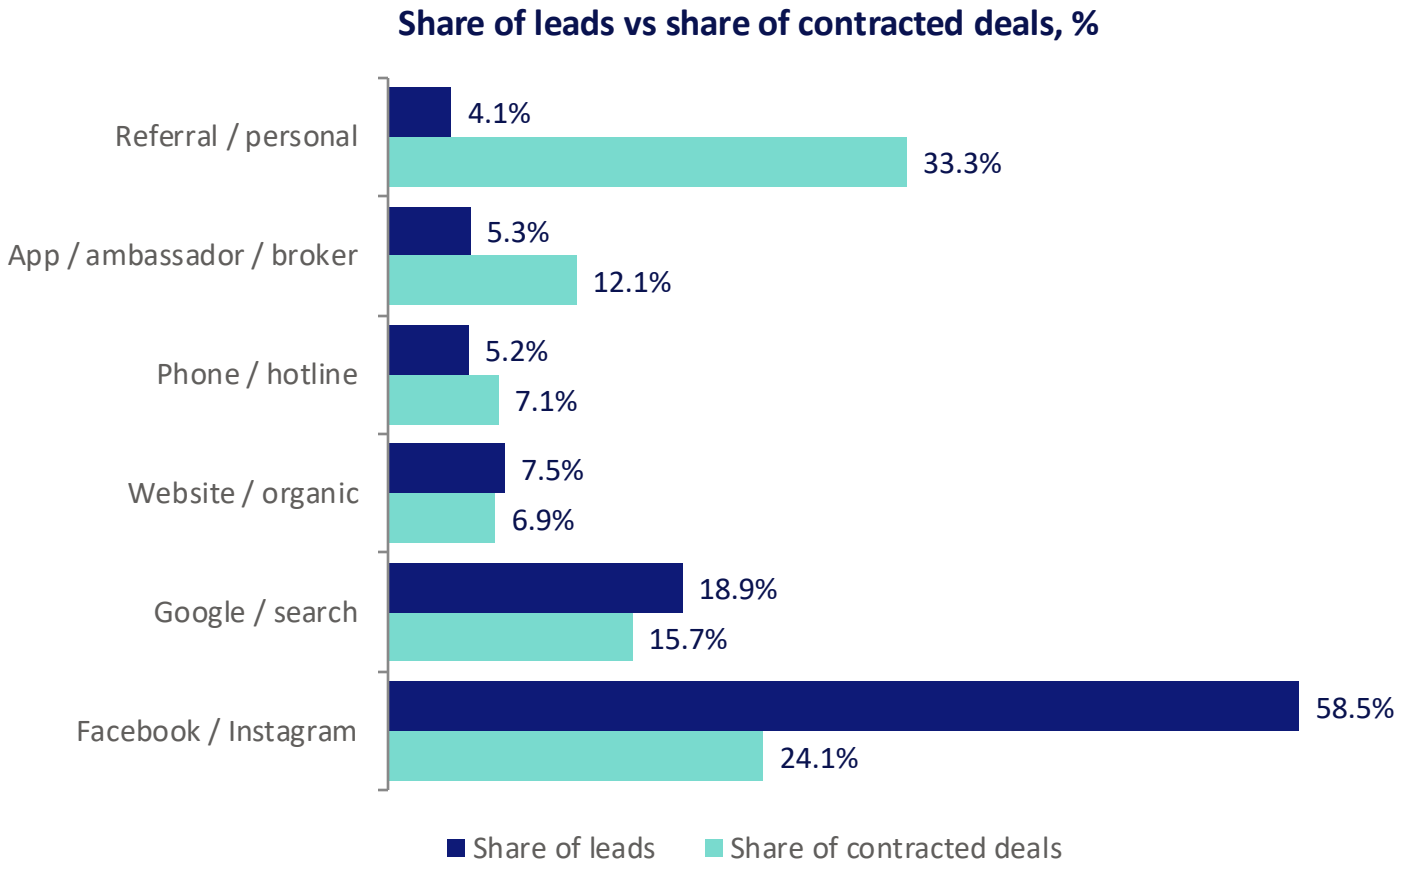

Budget insight: average stated budget is EGP 4.94M (median 4.0M), but only 389 leads (0.7%) have one, and 379 of them are Primary. Differences between lead types cannot be read reliably until budget capture improves.

* Other types: 12 leads, 1 contracted (Commercial Seller). Too small to rely on.

Referral channels convert about 20x better than Facebook

Facebook brings 58% of leads but only 24% of deals; referral and personal leads bring 4% of leads and 33% of deals

Conversion by channel

Referral / personal	**13.7%**
App / ambassador	**3.9%**
Phone / hotline	**2.3%**
Website	**1.6%**
Google	**1.4%**
Facebook	**0.7%**

Ambassador app leads alone convert at 18%.

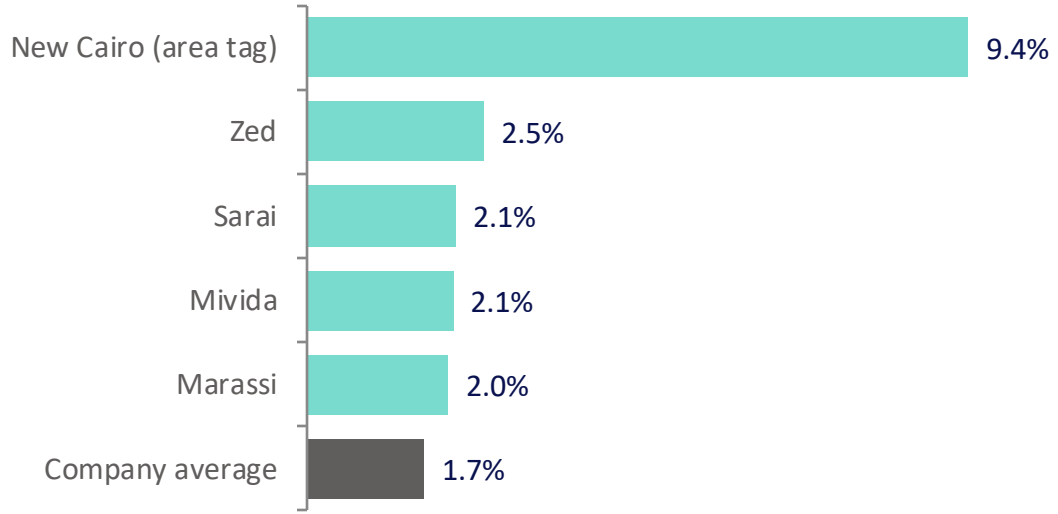

No marketing cost data is available, so this compares yield, not return on spend.

Lead locations: big volumes, weak yield

The five biggest projects hold 12% of leads and convert at 0.1% to 1.5%; untagged leads convert best

Top 5 by leads	Leads	Deals	Conv.
Badya	1,569	4	**0.25%**
Al Maqsad	1,496	22	1.47%
General Inquiry	1,021	5	0.49%
Taj Villas	949	1	**0.11%**
Taj City	915	9	0.98%

Best converting locations (250+ leads), %

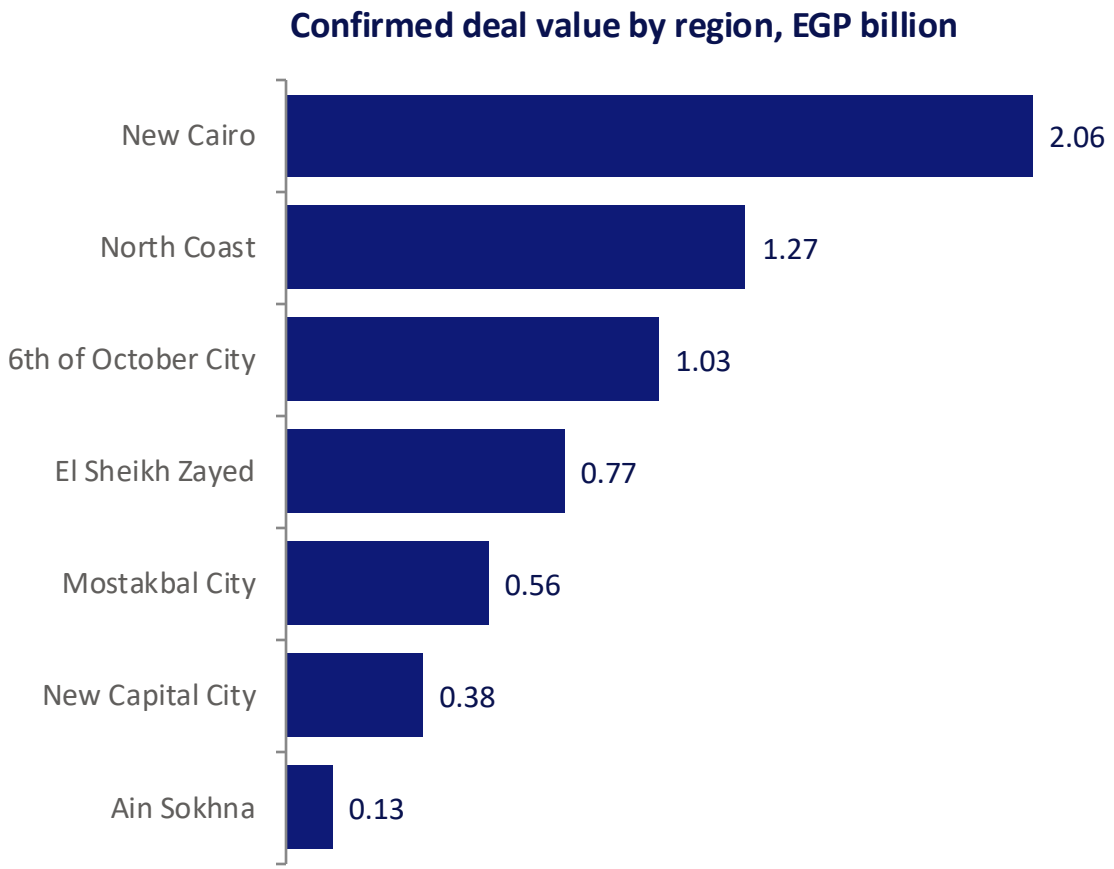

31% of deals

come from the 13.6% of leads with no location, mostly personal and referral leads

Zero-yield: Fifth Square (548 leads) and the recruitment campaign (600 leads) produced no contracts. Taj Villas: 949 leads, 1 deal.

Where the money is: New Cairo, North Coast, October

Region (unit location) drives deal value and speed; New Capital is cheapest but fastest

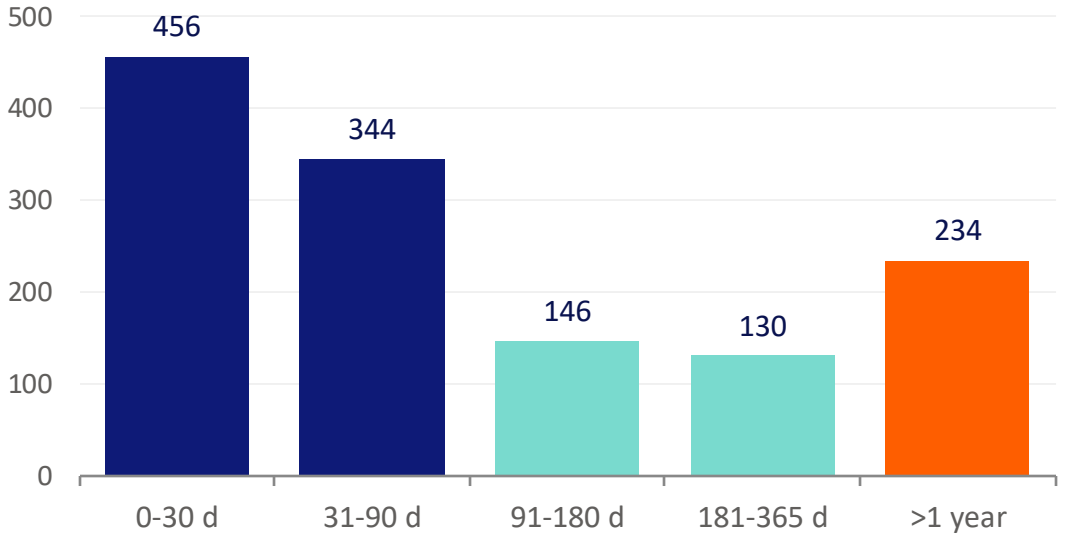

Region	Avg deal (EGP M)	Median days
New Cairo	9.8	44
North Coast	7.4	**119**
6th of October City	7.9	43
El Sheikh Zayed	**11.5**	80
Mostakbal City	6.9	47
New Capital City	4.3	**28**
Ain Sokhna	4.5	62

- **North Coast** takes 119 days to close, over 4x New Capital (28).
- **El Sheikh Zayed** has the highest ticket of the large regions (EGP 11.5M).

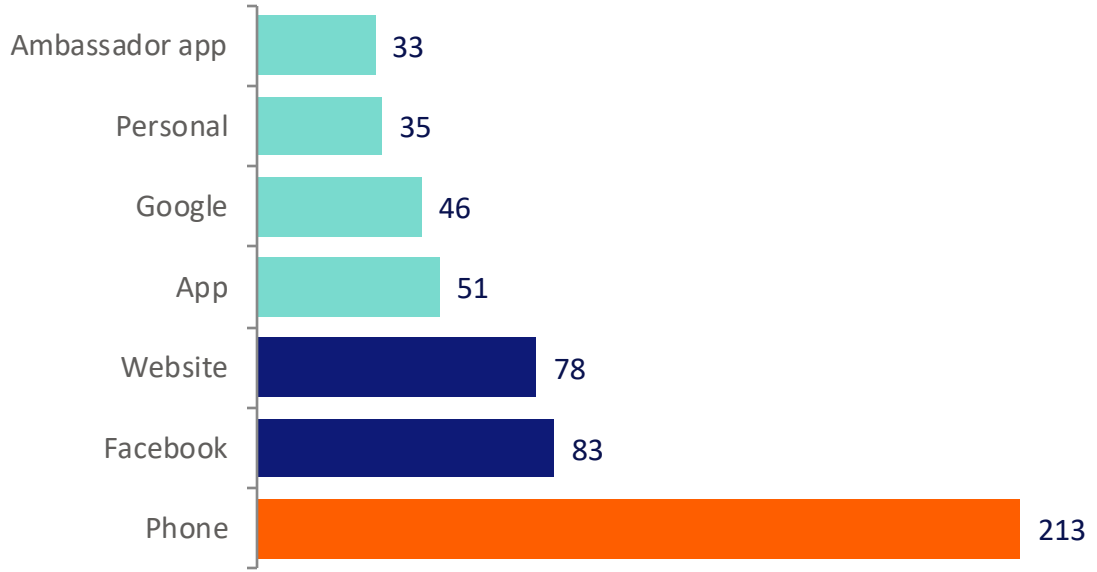

Time to sale: fast when referred, slow when paid

Half of contracts close within 53 days, and channel decides the pace

Contracts by days from lead creation

Median days to contract, by source

53 days
median lead to contract

35%
close within 30 days

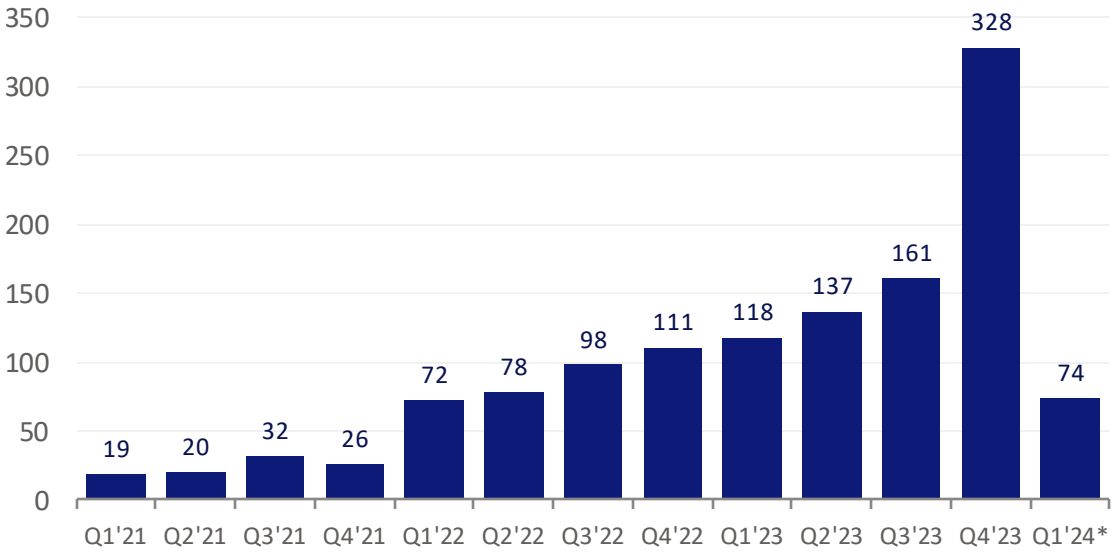

61%
close within 90 days

18%
take more than a year

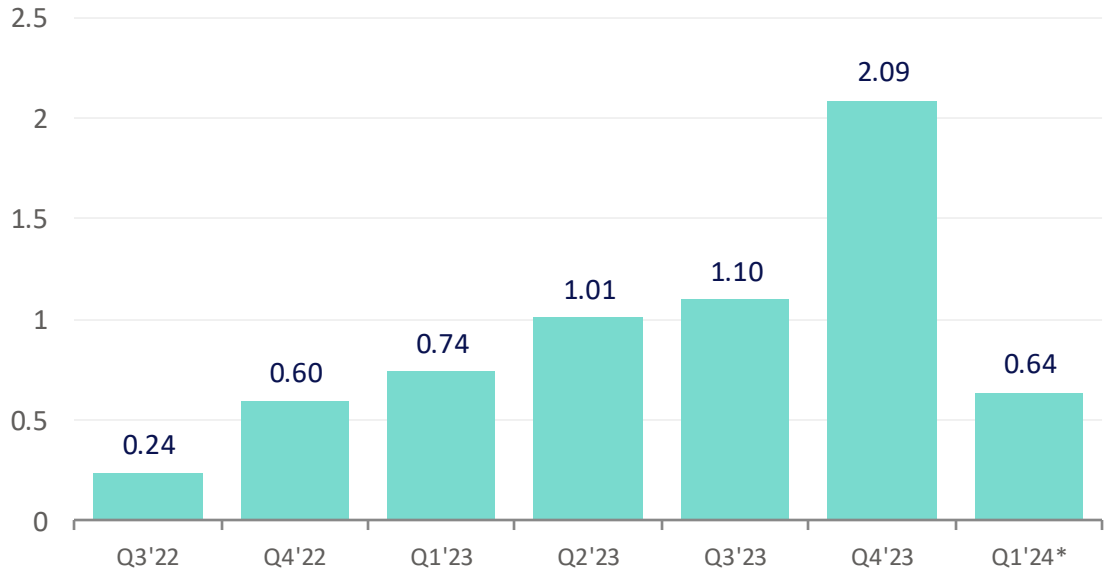

Sales are accelerating, with a big Q4 peak

Q4 2023 delivered 328 contracts, almost 3x the same quarter a year earlier

Contracted deals per quarter

Confirmed value per quarter, EGP billion

328
Q4 2023 contracts
▲ +195% vs Q4 2022

EGP 2.09B
Q4 2023 confirmed value
▲ +248% vs Q4 2022

EGP 11.5M
average deal in 2024 YTD
▲ vs EGP 8.3M in 2023

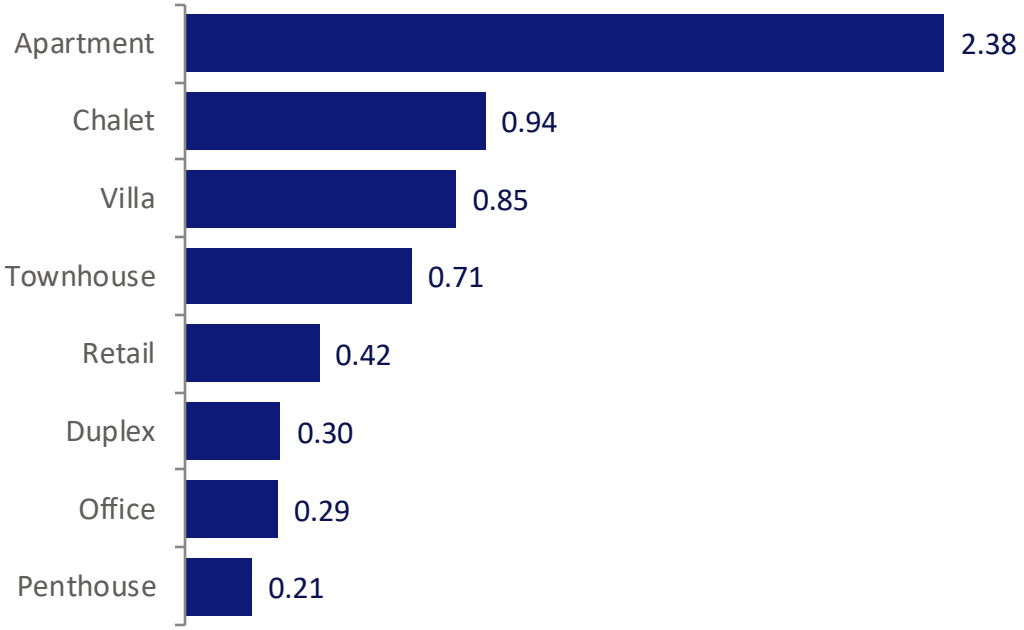

155
contracts in Dec 2023 alone
a year-end rush

* Q1 2024 is partial. Value is shown from Q3 2022, when actual_value capture began; coverage is 66% in Q4 2023.

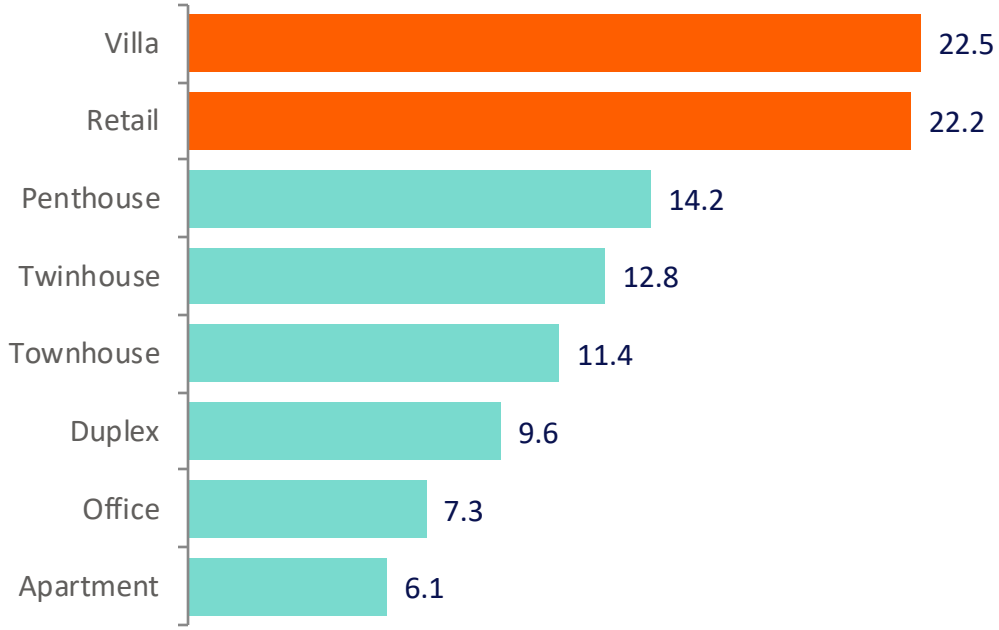

Apartments carry volume; villas and retail carry ticket size

Villas are 5% of sale records but 12% of confirmed value; apartments are 35% of records and 33% of value

Confirmed value by property type, EGP billion

Average deal size, EGP million

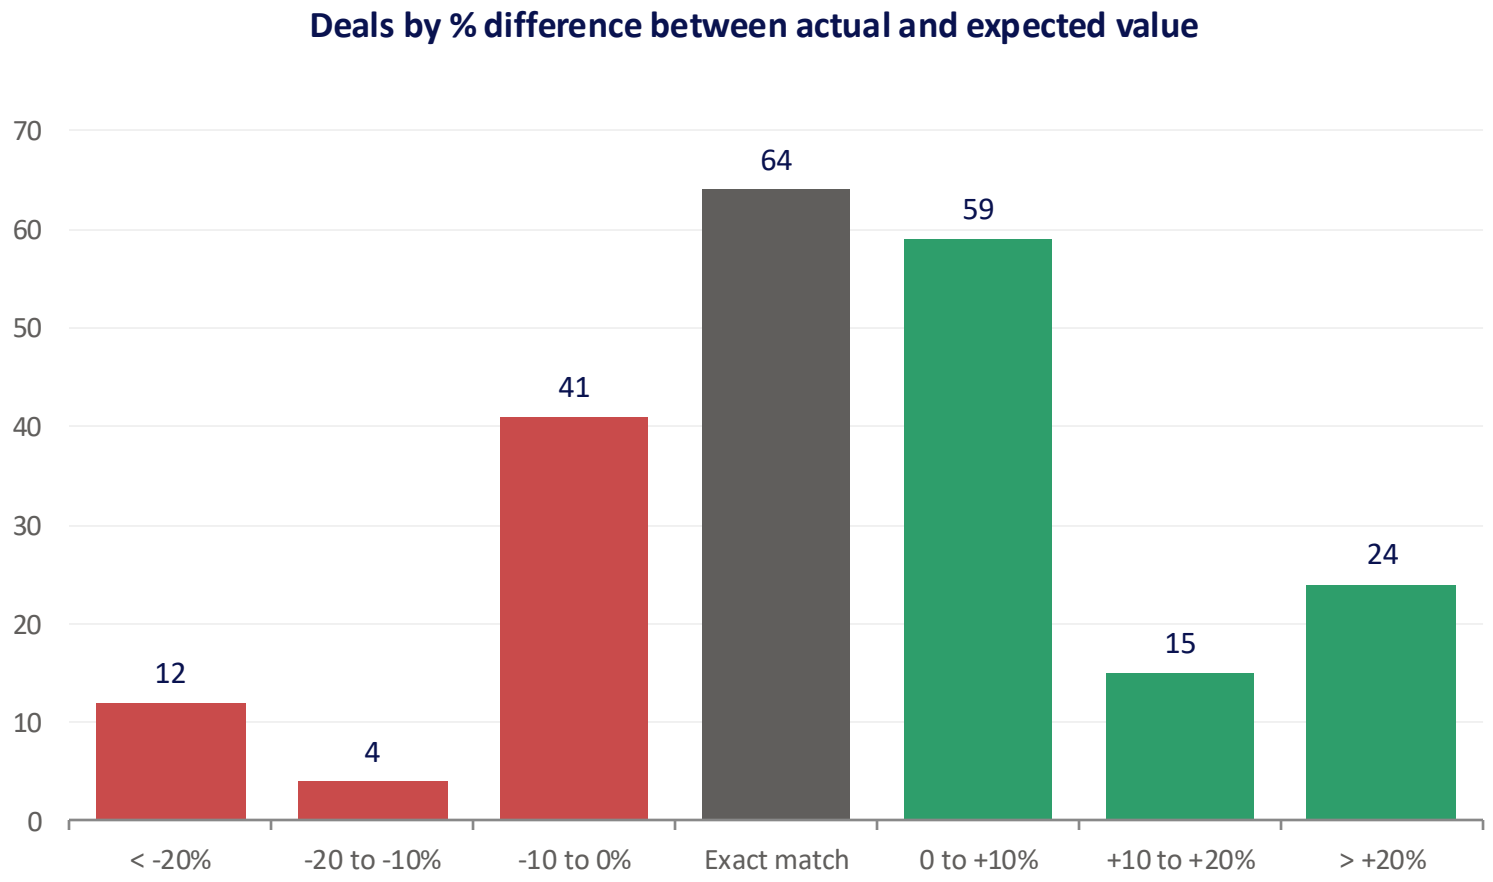

35% of sale records are apartments (776)

3.7x villa ticket vs apartment (EGP 22.5M vs 6.1M)

76% to 90% of records are contracted for every major type

Expected values are reliable, and slightly conservative

Actual deal value beats the expectation by 6.6% in total; three out of four deals land within 10%

+6.6%

actual vs expected in total: EGP 1.385B vs 1.299B

75%

of deals land within +/-10% of expectation

25%

of confirmed deals have an expected value, so most deals cannot be forecast-checked

219 deals with both values; 44 expected values under EGP 1,000 are placeholders and were excluded.

Sales performance is broadly spread across agents

The top 3 agents hold 9% of confirmed value; the top 10% (26 of 265) hold 39%

Largest lead queues	Leads	Contracts	Conv.
Agent 68	5,218	6	**0.12%**
Agent 2748	3,640	15	**0.41%**
Agent 2942	1,492	17	1.14%
Agent 350	1,227	6	**0.49%**
Agent 735	1,120	17	1.52%

- **Five user ids hold 25%** of all assigned leads; the 15 agents with 500+ leads convert at a median 0.8%.
- **Premium specialists exist:** agent 387 averages EGP 16.2M per deal, agent 1192 EGP 38M.

Agent = lead owner (user_id). Reassignments may shift credit between agents.

About EGP 6.1B sits in the open pipeline

EGP 4.6B of early-stage deals plus EGP 1.45B of reservations waiting to convert

854

open sale records (no contraction date)

EGP 6.1B

open value: reserved units at unit value, the rest at expected value

189

reserved units not yet contracted, EGP 1.45B unit value

EGP 0.79B

of that reserved since Aug 2023 (64 units): the freshest, most recoverable

Action: run a weekly contract-recovery review of reserved-not-contracted units, newest first, and clean out stale reservations so the pipeline figure can be trusted. Reserved units close in a median of 9 days once worked.

Open records may include cancelled deals; the data has no cancellation flag.

Fixing data capture unlocks better decisions

Seven gaps limit what can be measured today

Area	What we found	Fix
Duplicates	79 exact duplicate lead rows	Enforce unique lead id on load
Lead source	40+ spellings (google, google website, paid search...) and 2 values stored as dates	One controlled source and campaign list
Location	13.6% blank; same project spelled differently	Mandatory project field, standard names
Budget	Filled on 0.7% of leads; 18 values under EGP 100K	Capture budget in the first call
Deal value	Actual value missing on 40% of contracts and before Q2 2022	Make actual value mandatory at contract
Property type	Missing on 28% of sale records; 2 unmapped ids	Required when a reservation is created
Lead status	337 of 940 contracted leads (36%) are not marked as sold	Auto-set status when a contract is logged

Recommendations: six moves, ranked by impact

Each is tied to a finding in this deck

Scale referral and ambassador programmes

13.7% conversion vs 0.7% on Facebook. 1,000 referral-type leads historically yield about 137 contracts vs 7 from Facebook.

Fix the Facebook funnel

Add budget and timing questions to forms, reply within minutes on WhatsApp. Lifting yield from 0.7% to 1.0% is about +98 contracts on today's base.

Clear and protect the lead queue

Work or retire 9,925 waiting leads, move 846 recruitment leads out, set a first-contact SLA.

Rebalance agent workloads

Five user ids hold 25% of leads. Cap queues and spread leads to agents who convert above 1.1%.

Recover reserved units

189 reserved units worth EGP 1.45B: weekly review, newest first, with a clear owner.

Make data capture mandatory

Budget, location, property type, actual value and sold status at the moment of entry.

Impact figures are indicative, based on historical conversion rates. Orange icons mark the two largest levers.

A 90-day plan and the KPIs to track

Start with quick wins on the queue and reservations, then rebuild the funnel

Days 0 to 30

Quick wins

- Retire or reassign the 9,925-lead backlog, remove recruitment leads
- Review all 189 reserved units; chase the 64 most recent
- Standardise lead source and location lists

Days 31 to 60

Rebuild the funnel

- Add qualifying questions to Facebook forms and instant WhatsApp reply
- Launch referral and ambassador incentives
- Cap agent queues and rebalance

Days 61 to 90

Lock it in

- Make budget, property type, actual value mandatory
- Plan the Q4 peak: capacity and inventory from September
- Start North Coast nurture earlier (119-day cycle)

90-day conversion

1.0% today, aim for 1.5%

First contact

under 1 hour (SLA)

Referral share of leads

4% today, aim for 8%

Reserved to contract

track weekly, target 80%

Budget captured

0.7% today, aim for 80%
