October 2021 – December 2022

OBJECTIVES

Two objectives guide this review

1 Attract the younger segment

32% of MiniCash customers are under 35, versus 25% at retail

2 Drive IT & Telecom market share

Market share doubled from 0.17% to 0.36% in H2 2022

HOW THE DECK IS ORGANISED

01

Sales deep dive

Growth, store formats, traffic and conversion, pricing, MiniCash and ramp-up

02

Younger segment

Customer age mix, gaming and upcoming initiatives

03

IT & Telecom share

Market share trend and where the share comes from

B.TECHX

PART 01

Sales deep dive

How the network grows, converts, prices and ramps up

206.8M

net sales from 38 stores, Oct 2021 – Dec 2022

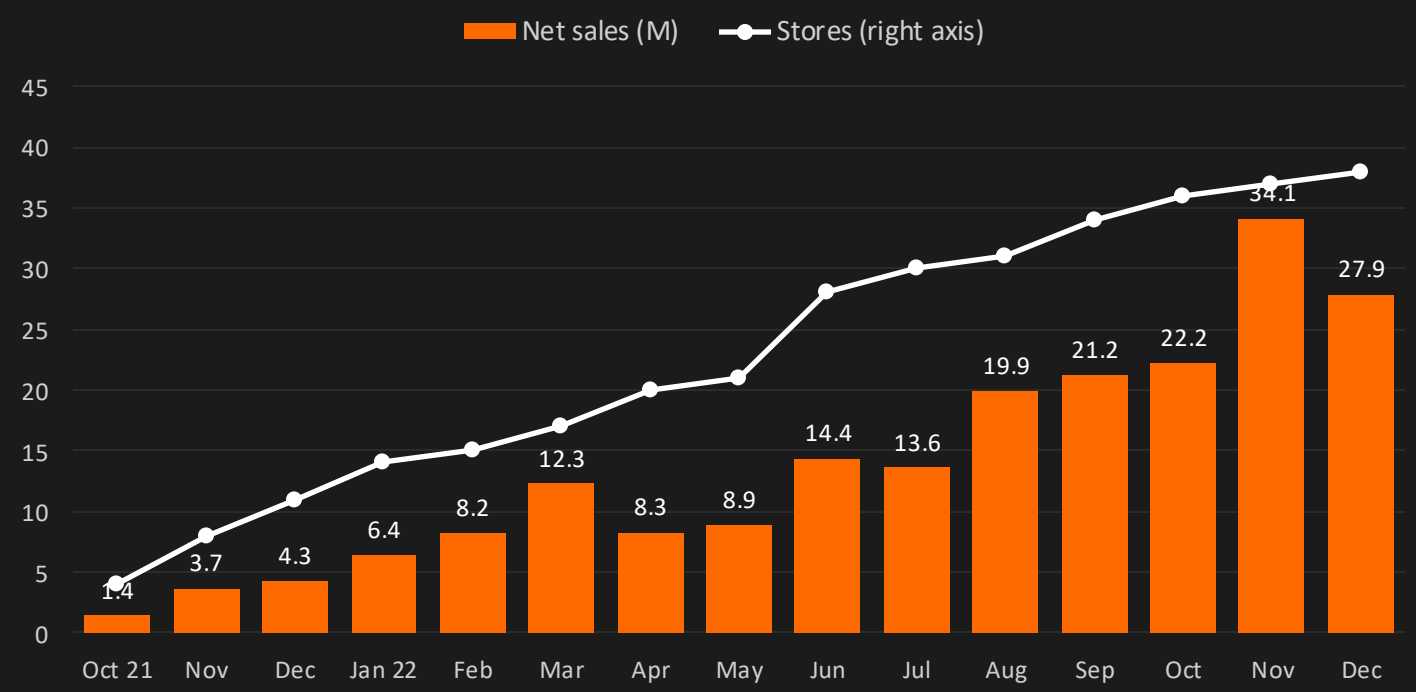

PART 1 · GROWTH

Net sales scale with stores, and each store sells more

206.8M
Total net sales

4 → 38
Stores, Oct 21 – Dec 22

0.35M → 0.73M
Sales per store per month

INSIGHT

Sales per store roughly doubled as the network grew. Sales jumped in March (Mother's Day, +50% on February) and November (Black Friday, +54% on October). December then fell 18% from November.

RECOMMENDATION

Pre-load stock, staff and offers ahead of Mother's Day and Black Friday, and run a December follow-up offer to hold sales after the peak.

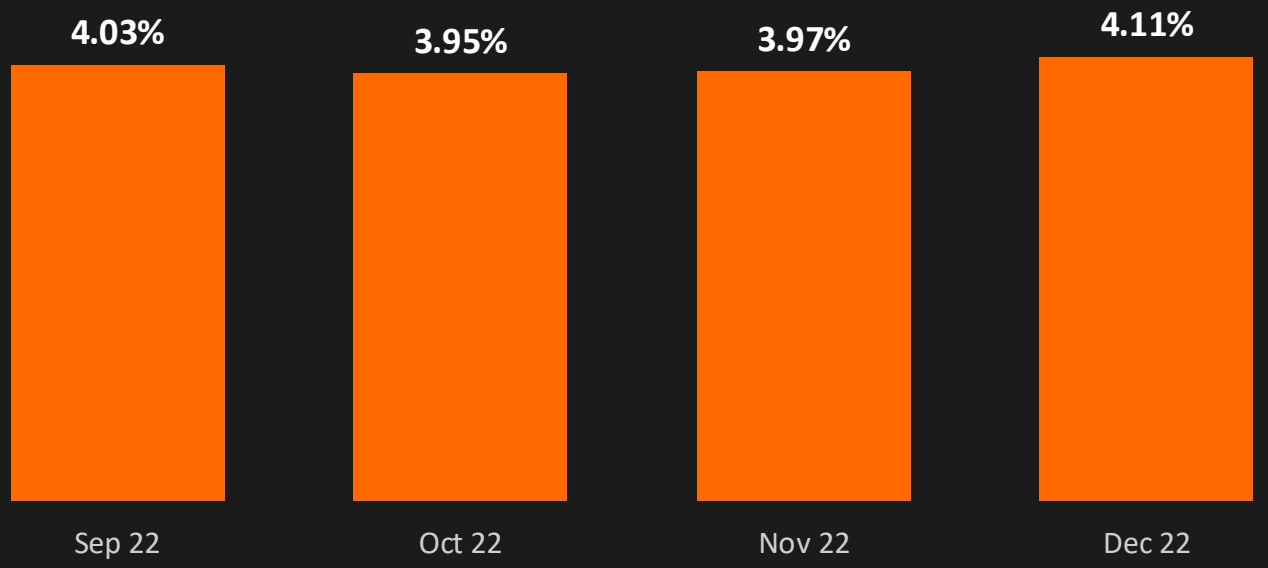

Share of retail has plateaued near 4% since September

2.29%
Share of retail sales since launch

4.11%
December 2022 share

+4 stores
Sep to Dec 2022 (34 → 38)

B.TECHX share of retail sales, monthly (%)

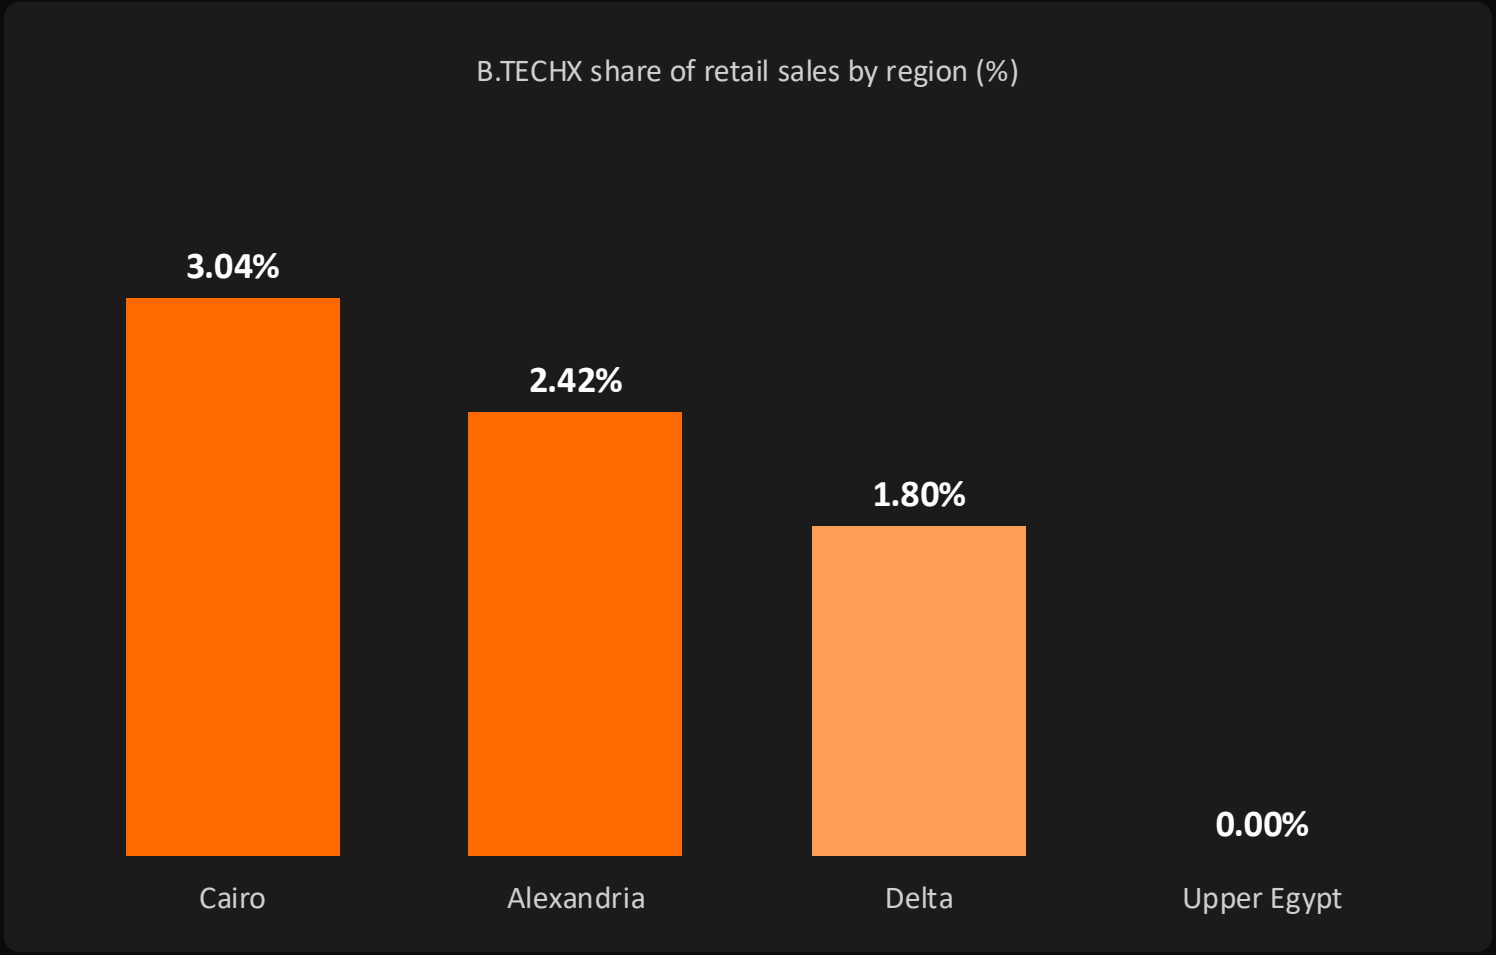

INSIGHT

B.TECHX holds 2.3% of retail sales since launch (206.8M of 9,026.4M). Since September the monthly share has stayed near 4% even as stores grew from 34 to 38.

RECOMMENDATION

Set a quarterly share-of-retail target (for example 4.5%) and gate new openings on ramp-up, so added stores lift share and not just sales.

Cairo leads; Delta lags and Upper Egypt is untapped

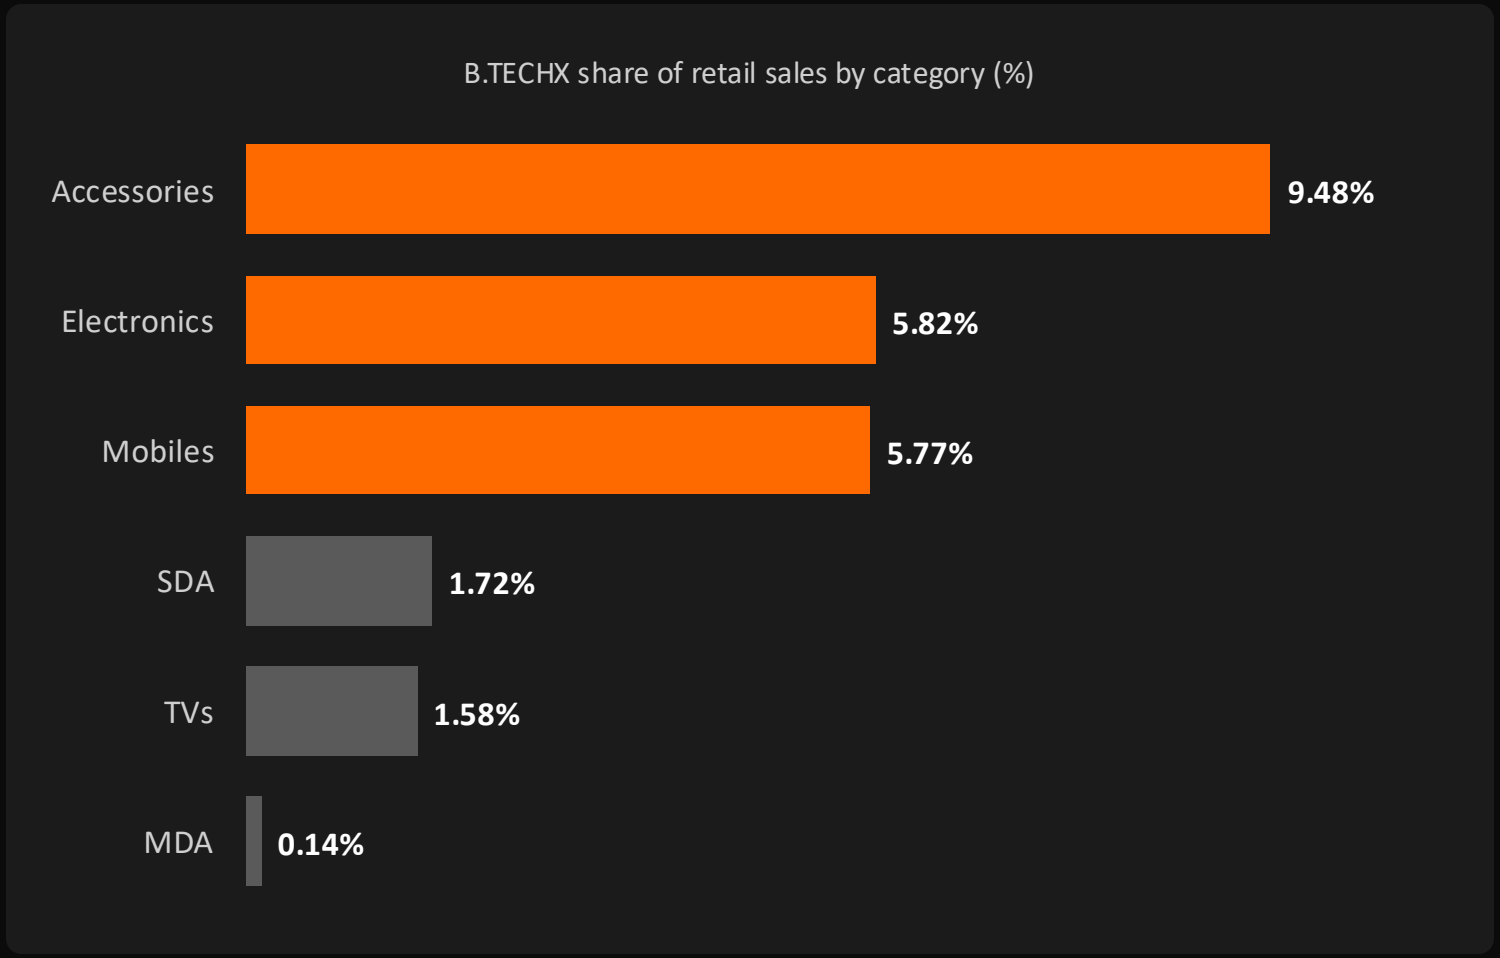

INSIGHT

Cairo contributes 3.04% of retail sales and Alexandria 2.42%, while Delta sits at 1.80%. B.TECHX has no stores in Upper Egypt, so retail holds 100% of sales there.

RECOMMENDATION

Diagnose Delta's gap to Alexandria (store types, locations, assortment) before adding stores there, and scope an Upper Egypt pilot starting with petrol-station sites.

Accessories is the standout category at 9.5% of retail

INSIGHT

Accessories reach 9.5% of retail category sales, about 4x B.TECHX's overall 2.3% share. Electronics and Mobiles sit near 5.8%, while TVs, SDA and MDA stay below 2%.

RECOMMENDATION

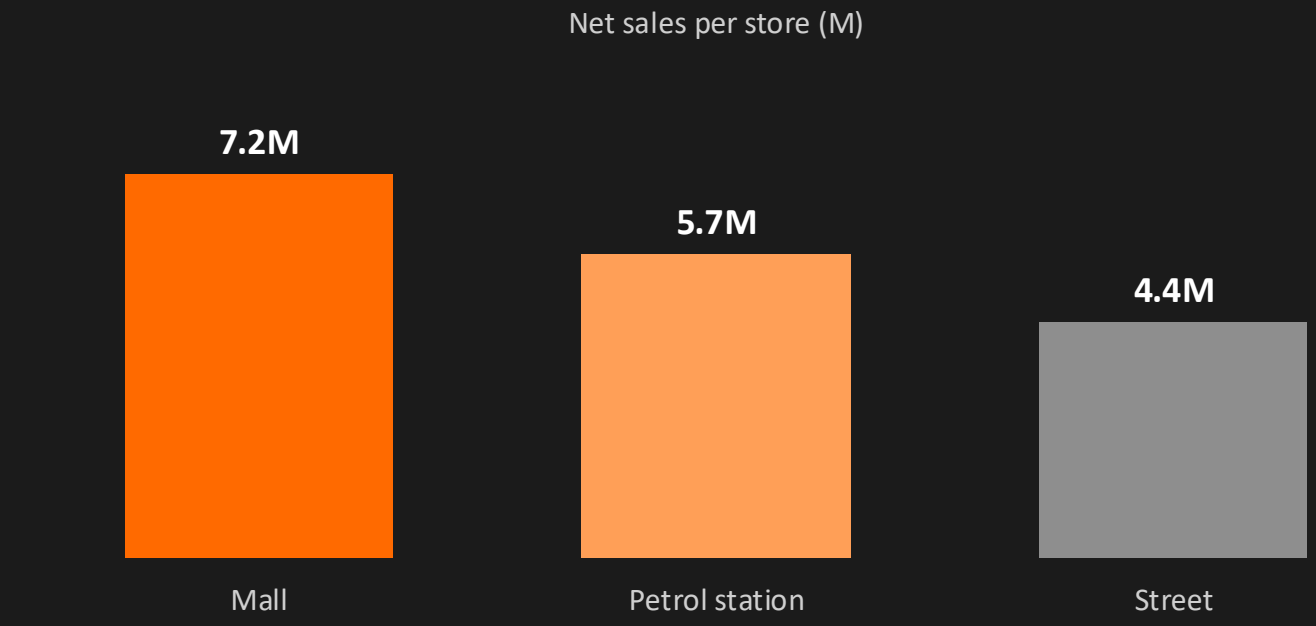

Make accessories attach a standard step on every mobile and IT sale, and test bundles in TVs and SDA, the weakest categories on share.

Malls sell most per store; petrol stations drive volume

124.4M
Petrol stations (22 stores)

42.9M
Malls (6 stores)

39.6M
Street stores (9 stores)

Cumulative net sales since launch; store opening dates differ.

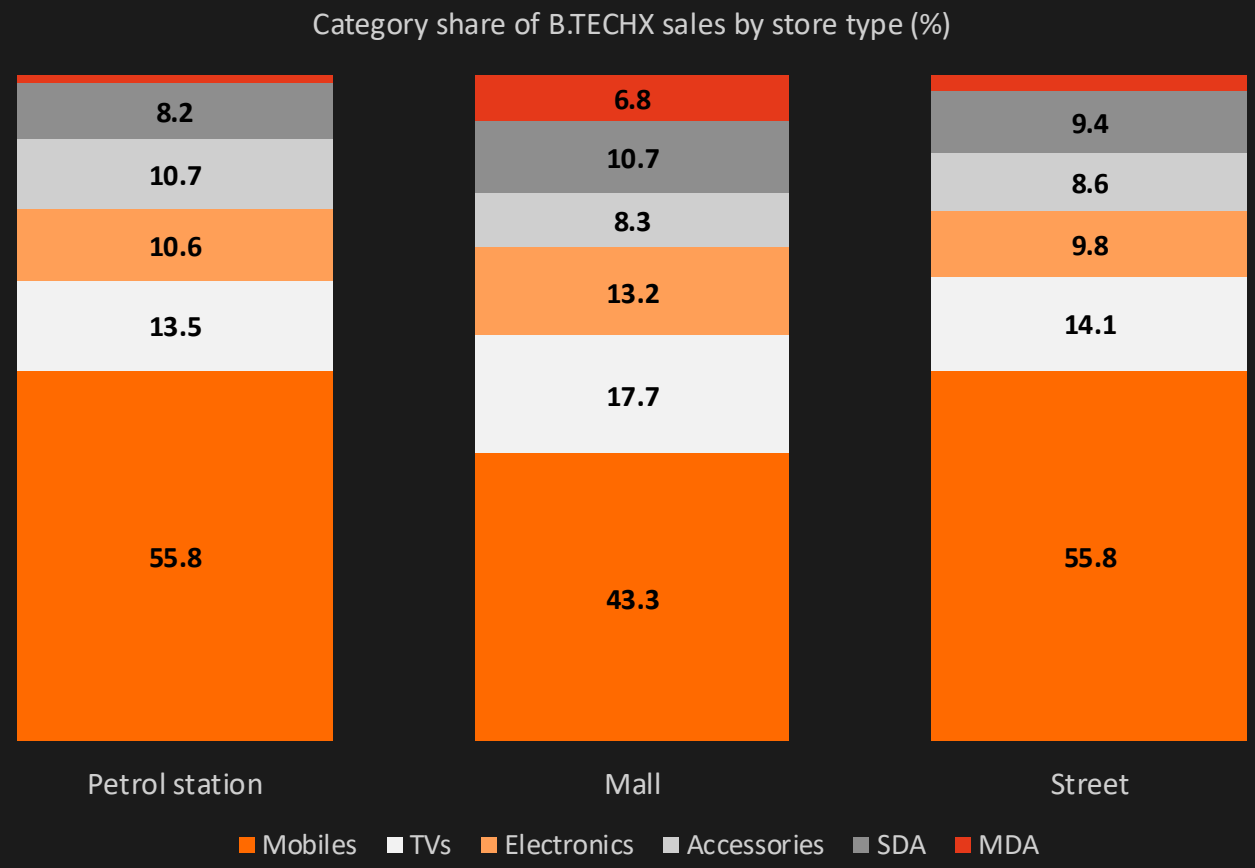

INSIGHT

Petrol stations deliver 60% of sales through 22 stores. Malls sell the most per store at 7.2M, 27% above petrol stations and 62% above street stores.

RECOMMENDATION

Prioritise malls for the next openings where the footprint allows, and set a minimum sales floor for street stores, the weakest format at 4.4M per store.

Mobiles carry petrol and street; malls sell a broader mix

INSIGHT

Mobiles are 56% of sales in petrol and street stores but 43% in malls, where TVs (18%), SDA (11%) and MDA (7%) fill the gap.

RECOMMENDATION

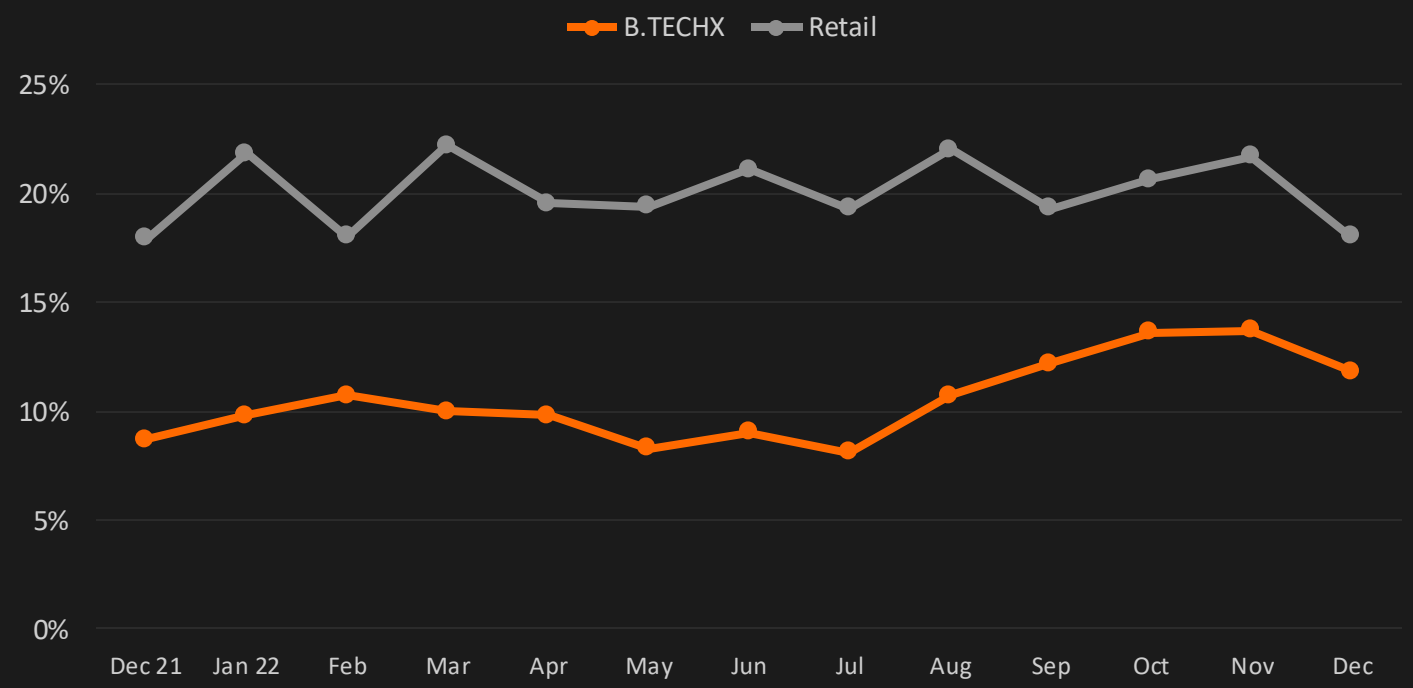

Keep petrol and street ranges led by mobiles and accessories, and widen the big-ticket TV, SDA and MDA assortment in malls, where shoppers already buy them.

Conversion is catching up, but traffic is slipping

11.8% vs 18.0%
December conversion, B.TECHX vs retail

8.1% → 13.7%
B.TECHX conversion, Jul → Nov

182 vs 468
Daily traffic per store, December

INSIGHT

The conversion gap to retail narrowed from 11 points in July to 6 in December. Daily traffic per store fell from 224 to 182 (-19%), so growth now comes from conversion, not footfall.

RECOMMENDATION

Lock in the gains with a 15% conversion target and add a footfall plan. At constant traffic, matching retail's 18% would lift sales by about 50%.

No store beats the average on both traffic and conversion

Daily traffic average: 174 | Conversion average: 11%

10 stores

Grow traffic

Conversion above 11%, traffic below 174

8 petrol · 1 mall · 1 street

0 stores

Stars

Above average on both

No store here yet

6 stores

Investigate

Below average on both

5 petrol · 1 street

9 stores

Fix conversion

Traffic above 174, conversion below 11%

4 petrol · 3 street · 2 mall

INSIGHT

All 9 stores with above-average traffic convert below the 11% average, and 10 stores convert above it on thin traffic. Fixing conversion and building traffic are two separate jobs.

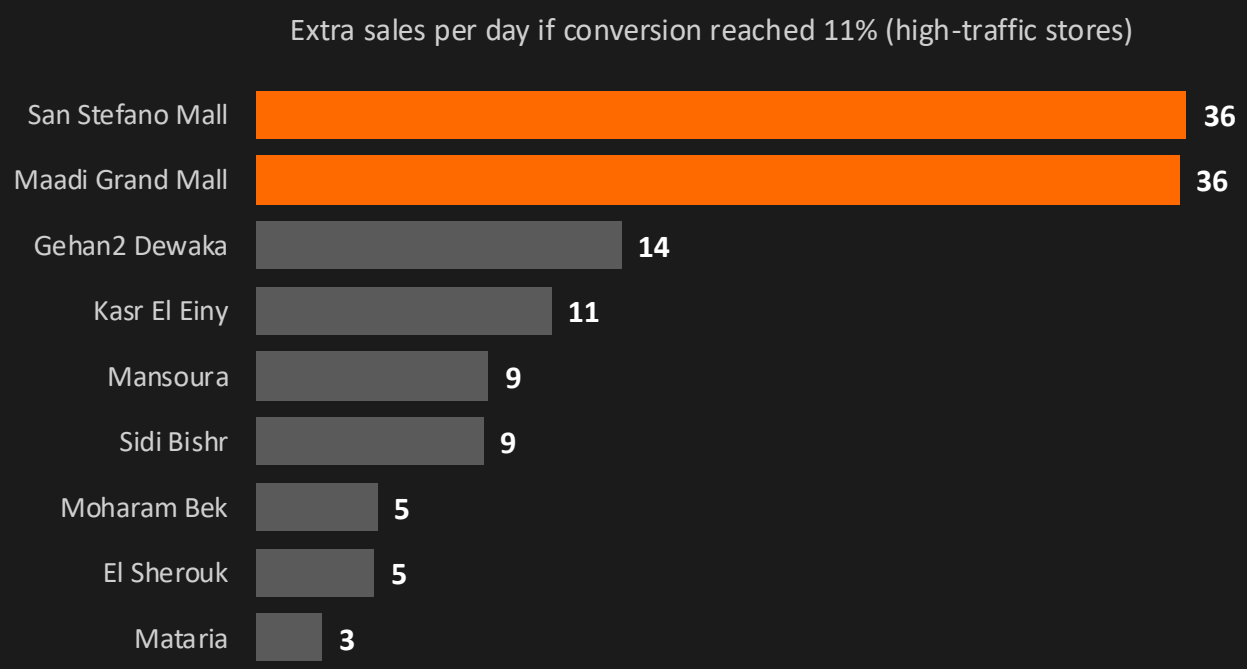

RECOMMENDATION

Run two tracks: a conversion programme for the 9 busy stores and a local traffic programme for the 10 high-converting ones. Review the 6 weakest stores on every factor.

Fix conversion first: two malls hold over half the gap

≈127
Extra sales per day at 11% conversion

56%
Of the gap sits in two malls

INSIGHT

Maadi Grand Mall has the most traffic (672) and the fastest ramp-up (13 days), yet converts 5.7%. San Stefano Mall converts just 2.7%, the lowest in the network.

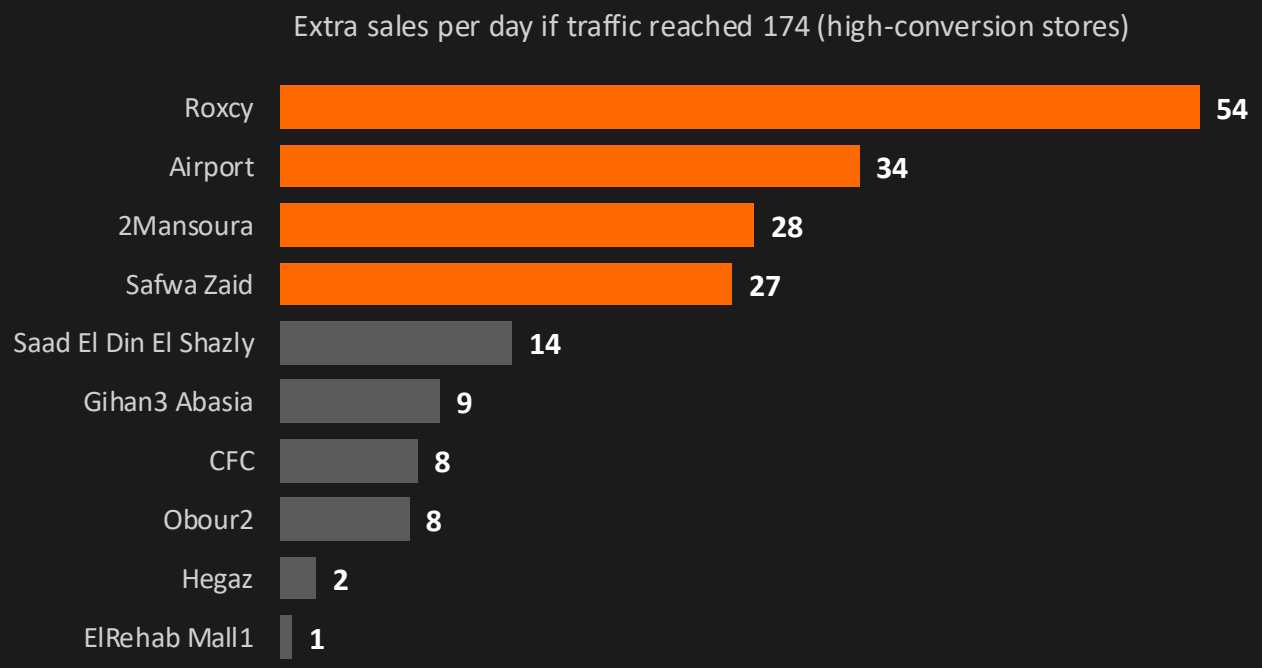

RECOMMENDATION

Start with product-knowledge training, an assortment audit and a process check at Maadi Grand and San Stefano. Aim for 8%+ in 90 days, then roll out to the other 7 stores.

Four petrol stores hold most of the traffic upside

≈185
Extra sales per day at 174 traffic

77%
Of the upside sits in four stores

INSIGHT

Roxcy converts 39% of its 35 daily visitors, 3.6x the network average. Airport (28%), Safwa Zaid (23%) and 2Mansoura (22%) also convert far above average on very low traffic.

RECOMMENDATION

Test local activation at Roxcy, Airport, 2Mansoura and Safwa Zaid: forecourt signage, geo-targeted offers and SMS promotions to nearby residents. Track visits weekly.

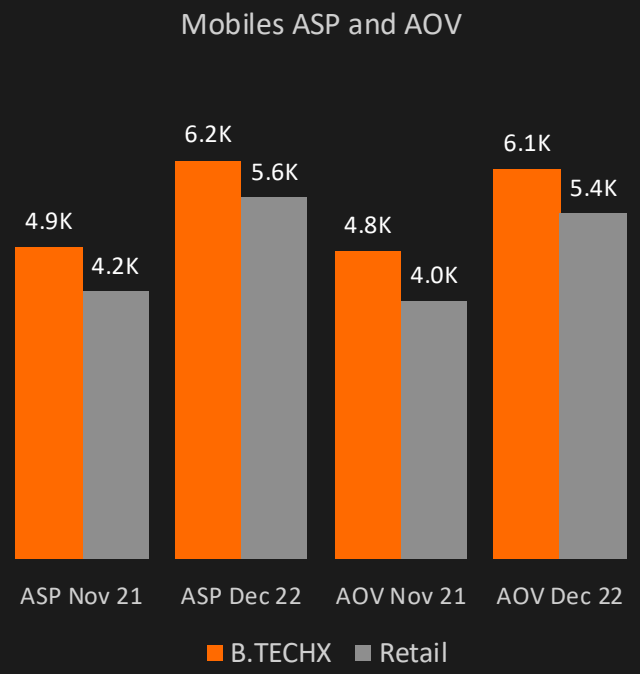

The mobile price premium is real but shrinking

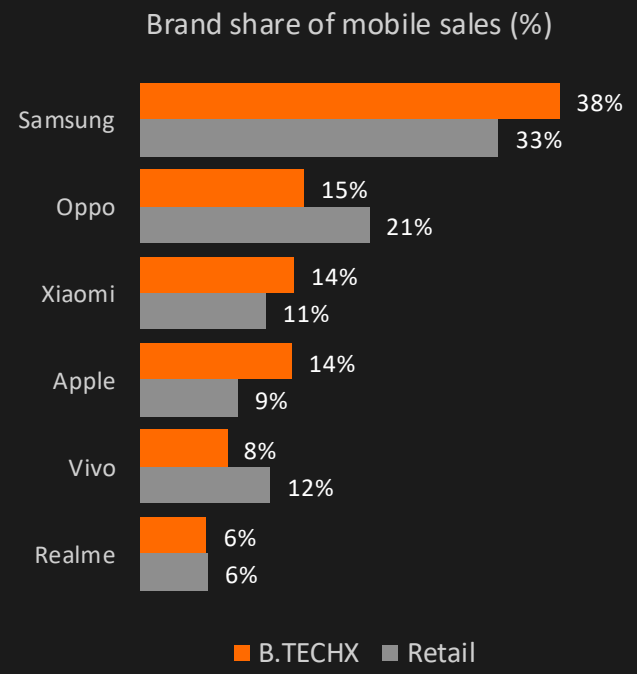

+17% → +10%

ASP premium, Nov 21 → Dec 22

+19% → +13%

AOV premium, Nov 21 → Dec 22

INSIGHT

B.TECHX ASP still beats retail (6,194 vs 5,621 in December), but the premium has narrowed. Apple (13.8% vs 9.0%) and Samsung (38.2% vs 32.7%) are over-represented in its mix.

RECOMMENDATION

Defend the premium: lead with Apple and Samsung flagships, add trade-in and MiniCash for high-end models, and keep Oppo and Vivo as value anchors.

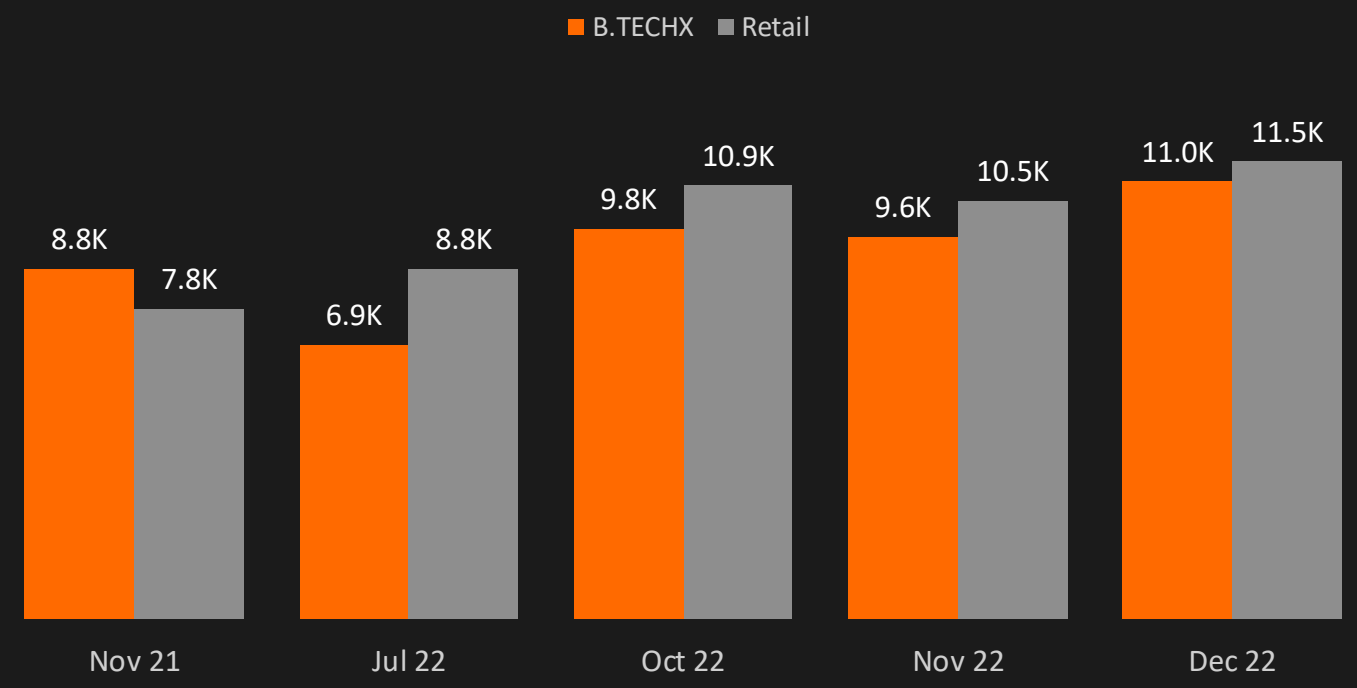

IT prices are closing the gap to retail

8.8K → 11.0K

B.TECHX IT ASP, Nov 21 → Dec 22

-22% → -4%

ASP vs retail, Jul → Dec 22

INSIGHT

IT ASP rose 25% over the period. After sitting 22% below retail in July (6.9K vs 8.8K), B.TECHX is now within 4% (11.0K vs 11.5K).

RECOMMENDATION

IT supports the market-share objective: bundle premium laptops with accessories and MiniCash, where B.TECHX trails retail by 10 points (44% vs 54%), to lift both ASP and share.

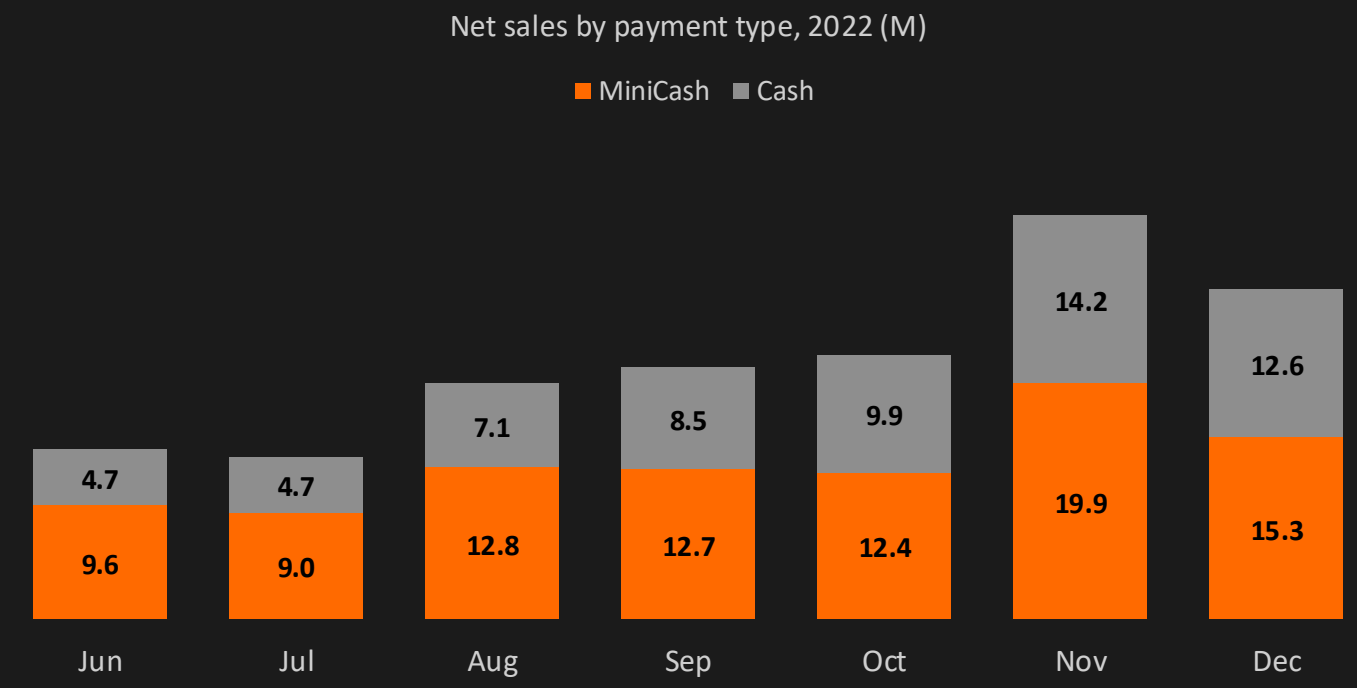

MiniCash share is easing as cash sales accelerate

67% → 55%

MiniCash share of sales, Jun → Dec

2.7x vs 1.6x

Cash vs MiniCash growth, Jun → Dec

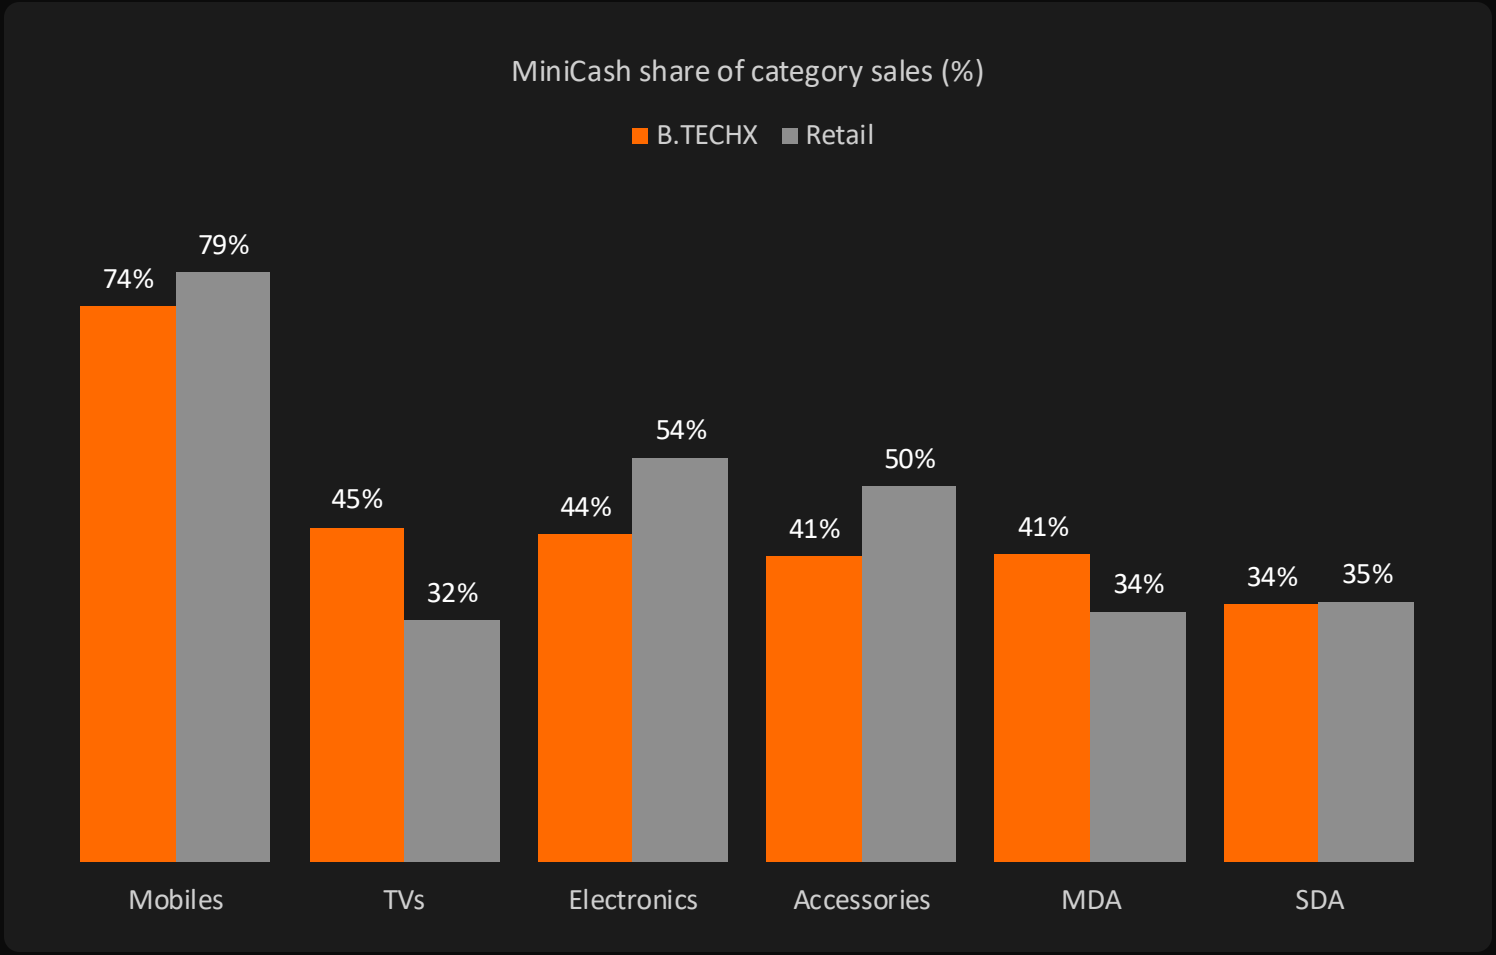

INSIGHT

MiniCash still leads, but cash grew 2.7x from June to December (4.7M to 12.6M) while MiniCash grew 1.6x (9.6M to 15.3M). Overall MiniCash is 59% of sales versus 44% at retail.

RECOMMENDATION

Read cash growth as wider reach, and keep MiniCash as the acquisition engine: offer MiniCash at the till to cash buyers on big-ticket items.

MiniCash dominance comes from mix, not stronger uptake

INSIGHT

B.TECHX's higher MiniCash share is a mobile-mix effect. Within categories it trails retail in Mobiles, Accessories and Electronics, and leads only in TVs (45% vs 32%) and MDA.

RECOMMENDATION

Lift MiniCash take-up on accessories and electronics, where the gap to retail is 9-10 points, and replicate the TV financing offer that already works.

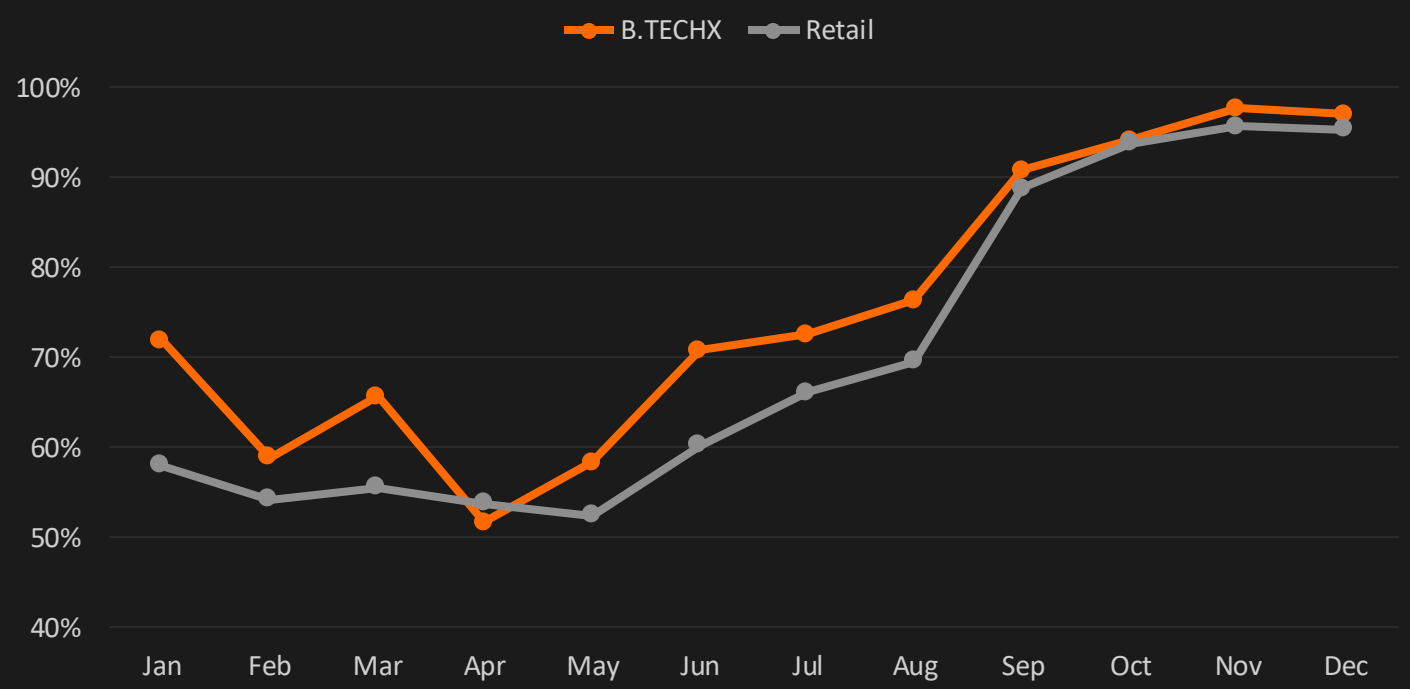

One-hour approvals jumped in September and now match retail

96.9% vs 95.3%

One-hour approvals, December

+14 → +1.6 pts

B.TECHX lead over retail, Jan → Dec

INSIGHT

One-hour approvals rose from 76% in August to 91% in September after the new credit policy and the removal of field investigation. B.TECHX's early lead over retail has faded.

RECOMMENDATION

Speed is now table stakes. Differentiate on approval rate and credit limits, and track both next to the one-hour metric.

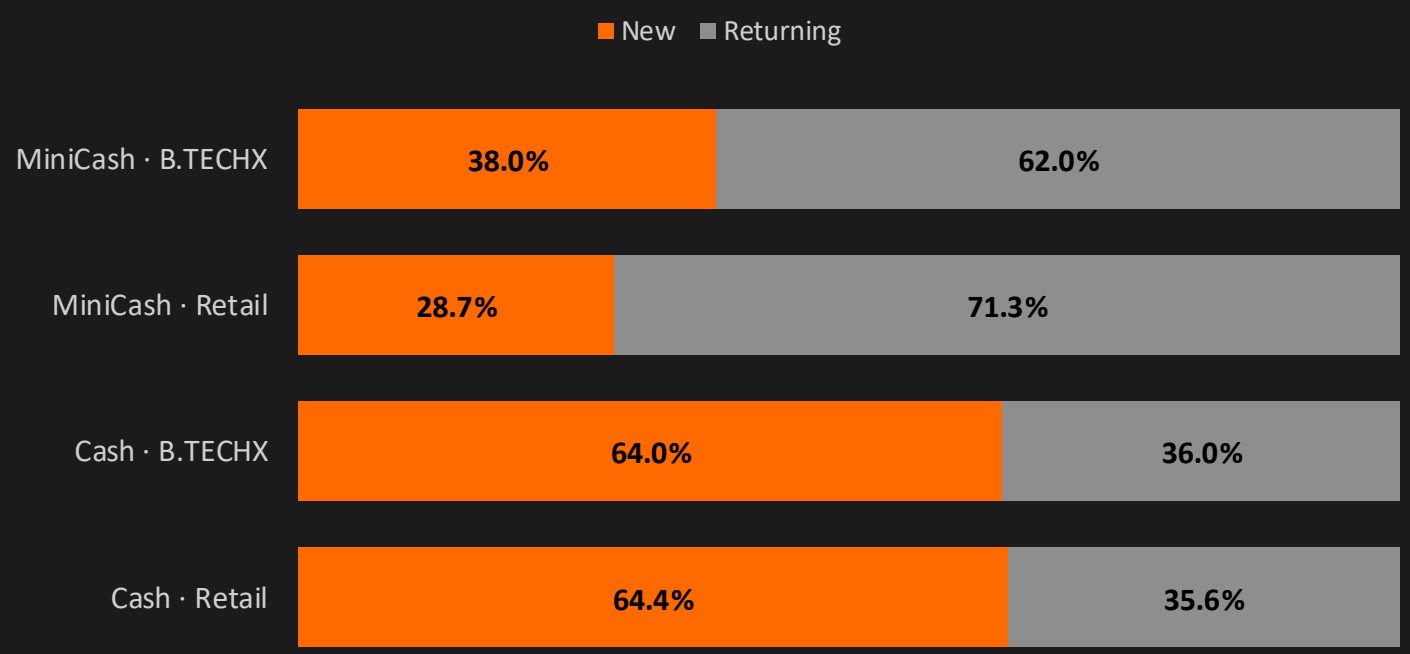

MiniCash brings in more new customers than at retail

38% vs 29%

New MiniCash customers, B.TECHX vs retail

64% vs 64%

New cash customers, both identical

INSIGHT

Cash customers look the same at B.TECHX and retail (64% new). In MiniCash, B.TECHX attracts 9 points more new customers, while 62% are already returning.

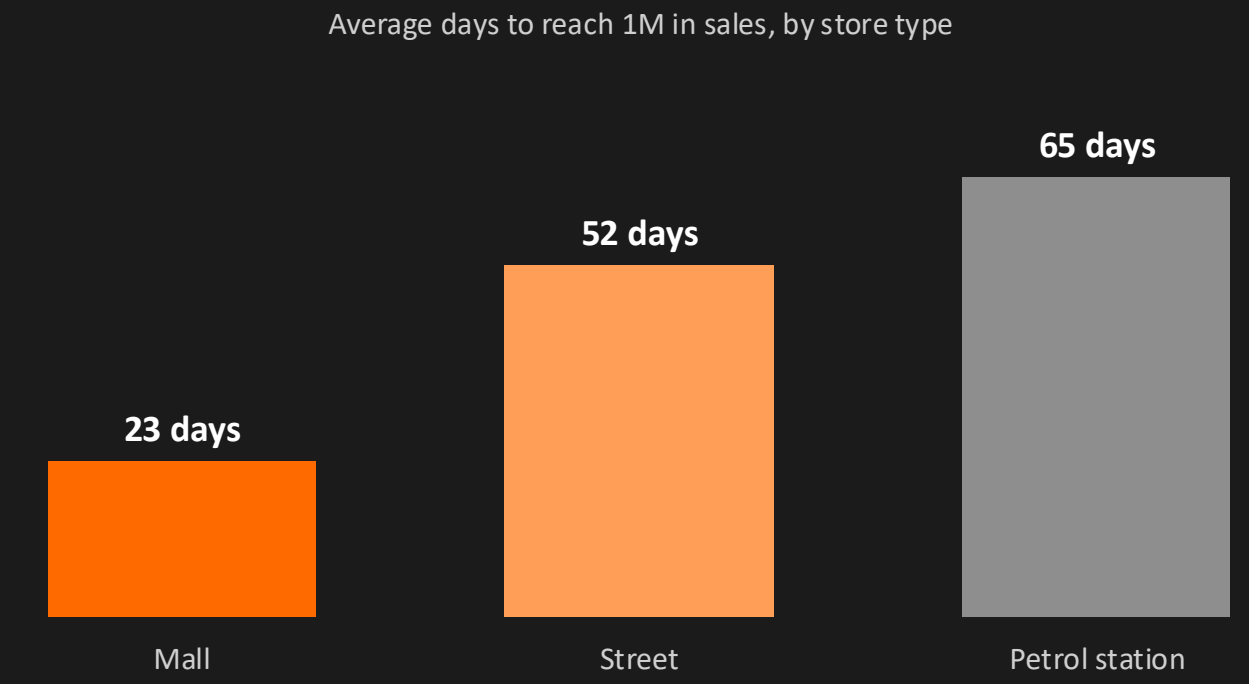

RECOMMENDATION

Use the 62% returning base for upgrade, accessory and trade-in offers, and keep onboarding simple to protect the new-customer inflow.

Malls reach 1M in sales 2.8x faster than petrol stations

55 days

Network average to reach 1M in sales

INSIGHT

Malls reach 1M in sales in 23 days, street stores in 52 and petrol stations in 65. Petrol stations are the slowest format to start, yet the biggest sales driver overall.

RECOMMENDATION

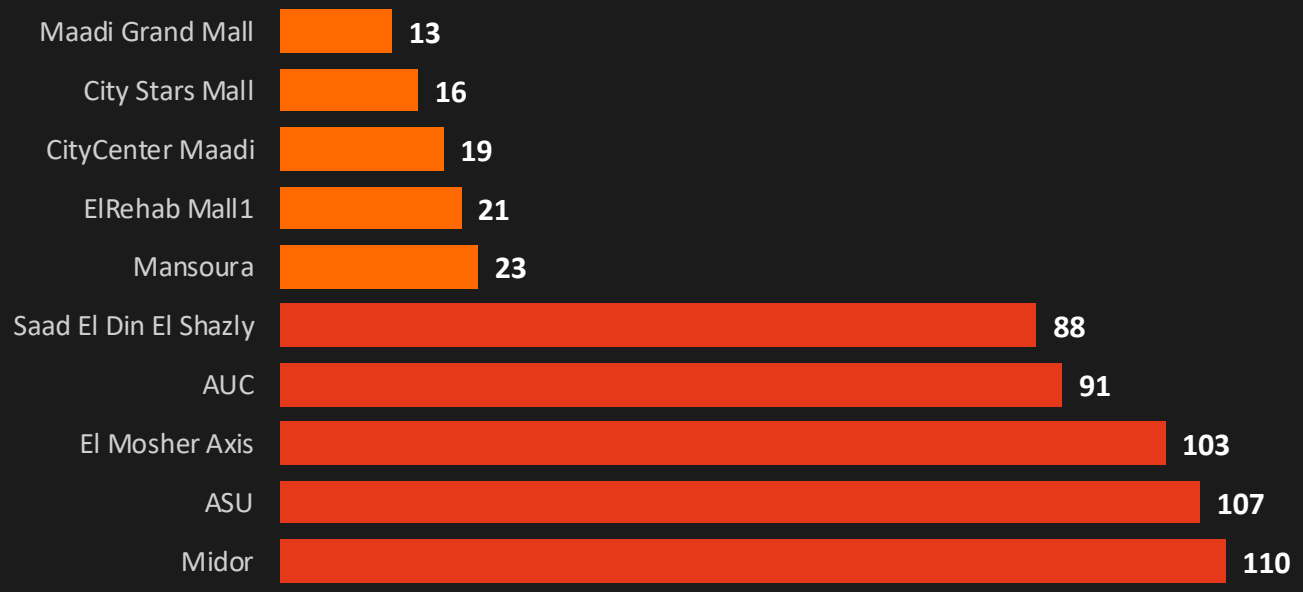

Budget a longer ramp for petrol sites with launch marketing in the first 60 days, and use mall openings when a quick sales lift is needed.

Ramp-up ranges from 13 to 110 days across stores

18
Stores faster than the 55-day average

10+
Stores slower than average

Days to reach 1M in sales: 5 fastest and 5 slowest stores

INSIGHT

Midor (110 days) and El Mosher Axis (103) are also in the low-traffic, low-conversion group, so their slow start looks structural rather than temporary.

RECOMMENDATION

Add a 90-day ramp-up review gate. For stores beyond 100 days (Midor, ASU, El Mosher Axis), choose between a format reset, relocation or exit.

PART 02

Attracting the younger segment

Who buys with MiniCash, and where gaming helps

32%

of MiniCash customers are under 35 (retail: 25%)

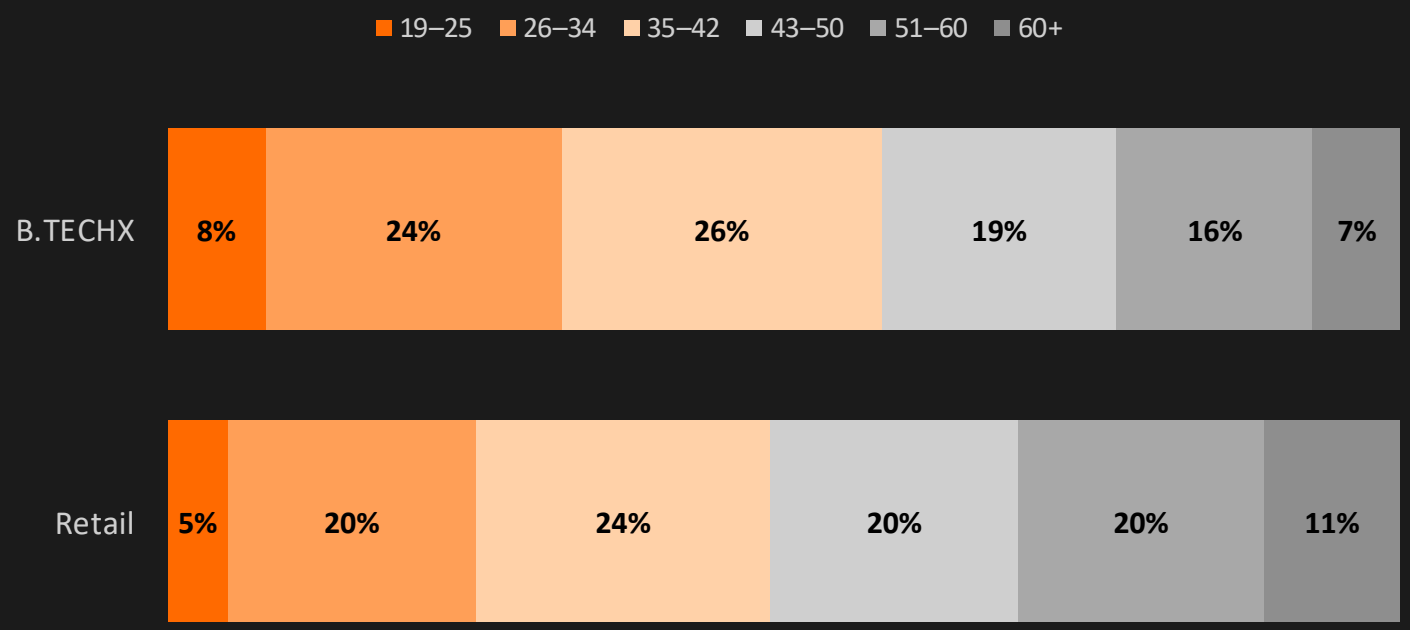

B.TECHX skews younger, with 7 more points under 35

32% vs 25%

MiniCash customers under 35

23% vs 31%

MiniCash customers over 50

INSIGHT

The 19–25 band is 8% versus 5% at retail, and over-50s fall from 31% to 23%. The core customer is 26–42 years old, at half of the base.

RECOMMENDATION

The shift is real but modest. Extend reach into the 19–25 band with campus, gaming and social channels, and serve the 26–42 core with career-stage bundles.

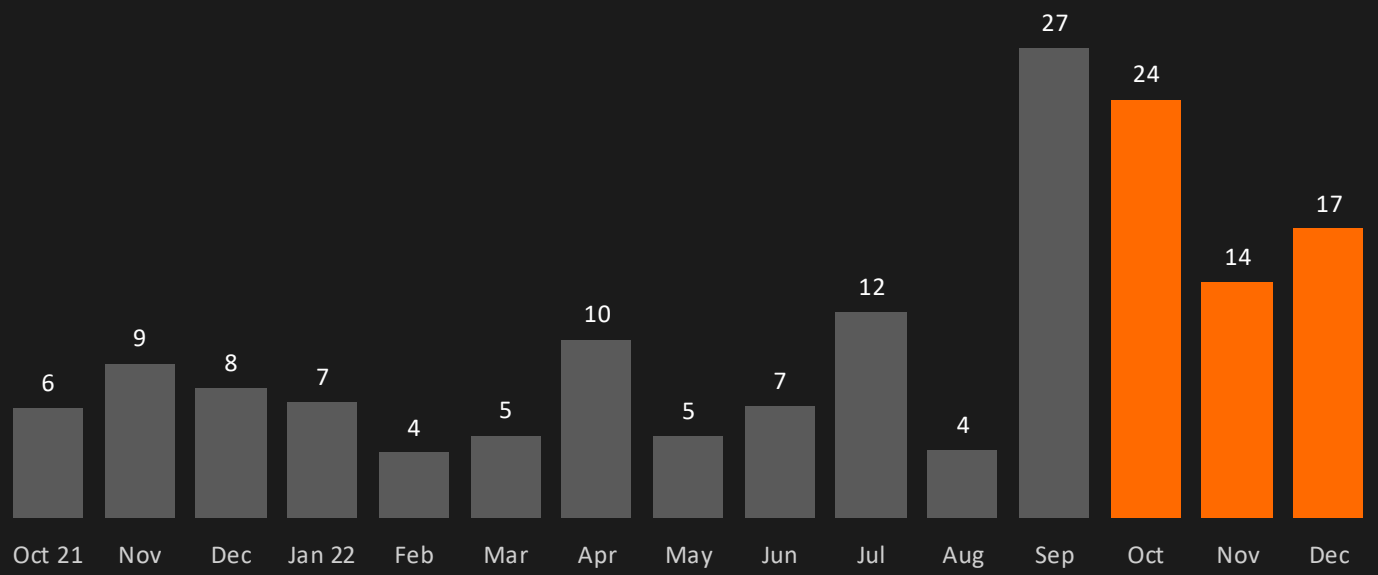

Gaming share is 5x B.TECHX's overall share of retail

11.4%
Of retail gaming sales

18% vs 5%
Q4 vs Q1 2022 average share

27%
Peak share, September 2022

B.TECHX share of retail gaming sales (%)

INSIGHT

Gaming over-delivers against the 2.3% overall share, and Q4 averaged 18% against 5% in Q1. Monthly share swings widely, so the spikes look launch- or promotion-driven.

RECOMMENDATION

Make gaming the hero category for the younger segment: dedicated in-store areas, launch-day events and MiniCash plans on consoles. A 15% share floor is a sensible target.

Upcoming: gaming areas and sales-team training

UPCOMING

Gaming area display in stores

WHY THE DATA SUPPORTS IT

Gaming already over-indexes: 11.4% of retail gaming sales versus a 2.3% overall share.

WHERE TO START

Start in the high-traffic stores and the malls, where broader ranges already sell.

PROPOSED KPI

Gaming share of 15% or more; attach rate of accessories

UPCOMING

GNK sales-people training (NPS)

WHY THE DATA SUPPORTS IT

The 9 busiest stores convert below the 11% average, worth about 127 extra sales a day.

WHERE TO START

Begin with Maadi Grand Mall and San Stefano Mall, the two largest gaps.

PROPOSED KPI

NPS baseline, then conversion up 2+ points within 90 days

B.TECHX

PART 03

Driving IT & Telecom market share

How fast share is growing and where it comes from

0.36%

market share in November 2022, up 5.6x since January

Market share has grown 5.6x in 2022

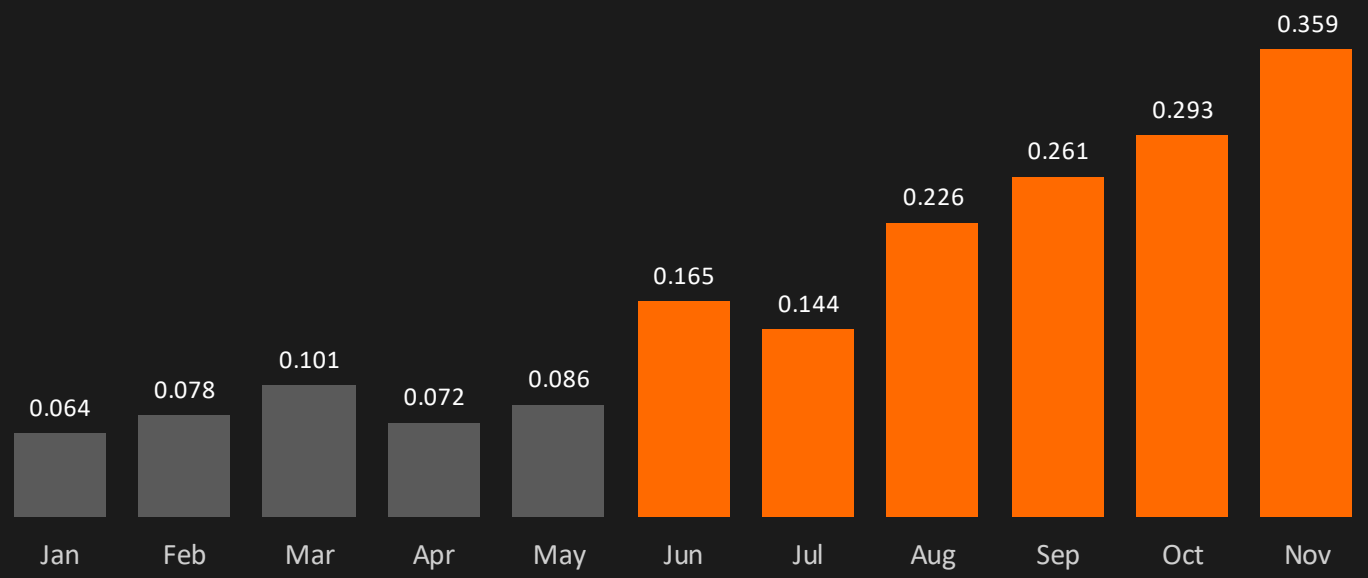

0.064% → 0.359%

B.TECHX market share, Jan → Nov

0.9% → 3.6%

Share of retail's market share

B.TECHX market share by month, 2022 (%)

INSIGHT

Share has risen every month since July, while retail's own share swung between 5.9% and 9.6%. B.TECHX now holds 3.6% of retail's market share, up from 0.9% in January.

RECOMMENDATION

Hold the momentum with mall openings and under-penetrated regions, and report share monthly beside the 4% retail-sales plateau to catch any divergence early.

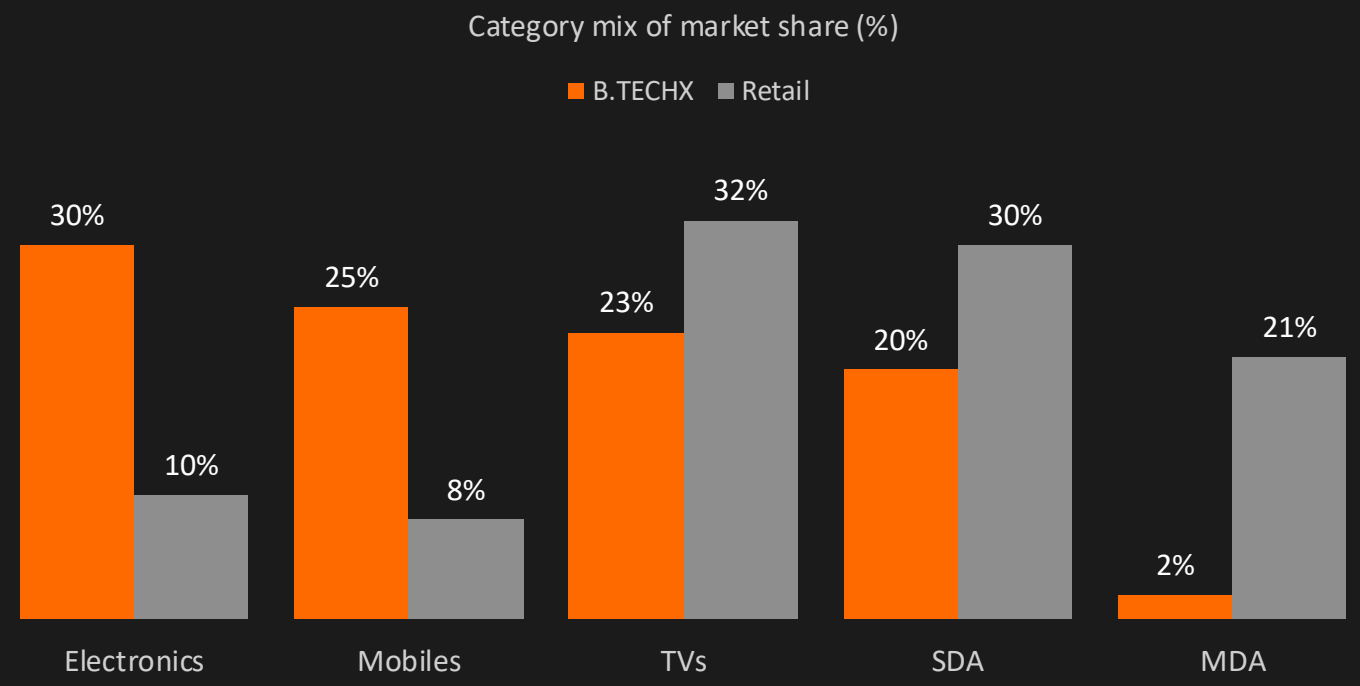

Electronics and Mobiles over-index; MDA is white space

0.25%
Avg share in IT

0.21%
Avg share in Mobiles

0.19%
Avg share in TVs

0.17%
Avg share in SDA

INSIGHT

Electronics and Mobiles make up 55% of B.TECHX's market share, about 3x their weight at retail (10% and 8%). MDA is almost absent: 2% of the mix versus 21% at retail.

RECOMMENDATION

Pilot MDA in malls, where it already makes 6.8% of sales, and keep investing in the IT and mobile ranges that are winning share.

SUMMARY

Five moves to turn growth into profitable share

OBJECTIVE SCORECARD

32%

of MiniCash customers are under 35, 7 points above retail

0.36%

market share in November, 5.6x since January

4.11%

share of retail sales in December, flat near 4% since September

1. **Fix conversion in the 9 busiest stores**
   About 127 extra sales a day at the 11% average; start with Maadi Grand Mall and San Stefano Mall.
2. **Build traffic where conversion is already high**
   About 185 extra sales a day; four petrol stores hold 77% of it.
3. **Expand where it works and reset what does not**
   Malls: 7.2M per store and 23-day ramp. Review stores beyond 100 days.
4. **Grow attach categories**
   Accessories (9.5% share) and gaming (18% in Q4): bundle with mobiles and IT.
5. **Move the MiniCash edge from speed to value**
   Approval speed now matches retail; use the 62% returning base and close the 9–10 point gap in electronics and accessories.

B.TECH
