Listing is a high-quality channel, but its share is slipping and the App funnel is getting noisier

25%

of Nawy transactions came from listing platforms YTD (-6.9% vs prior period)

57%

of listing valid leads come from the App, which carries only 22% of traffic

4.7x

App vs Website conversion to valid lead YTD (0.61% vs 0.13%)

54% > 30%

App leads qualified after 1 week, Jan 5 vs May 4 cohort

Volume up, share down

Listing transactions grew +2.2% YTD vs +9.8% for Nawy overall, so listing share fell to 25%. The 35.42% MTD share is still -14.2% vs the previous period.

App is the engine, Website the megaphone

Website brings 78% of traffic but 42% of valid leads. Website valid leads stay near 500 per period whether traffic is 330K or 650K.

Quality is the risk

App qualification, meetings and contractions have all declined while lead volume doubled. Super App launch and Android churn add measurement risk.

Source: Listing Weekly Report 3 (Looker Studio), data through May 19, 2025. Pre-Mar 30 points are 4-week blocks, later points are weekly.

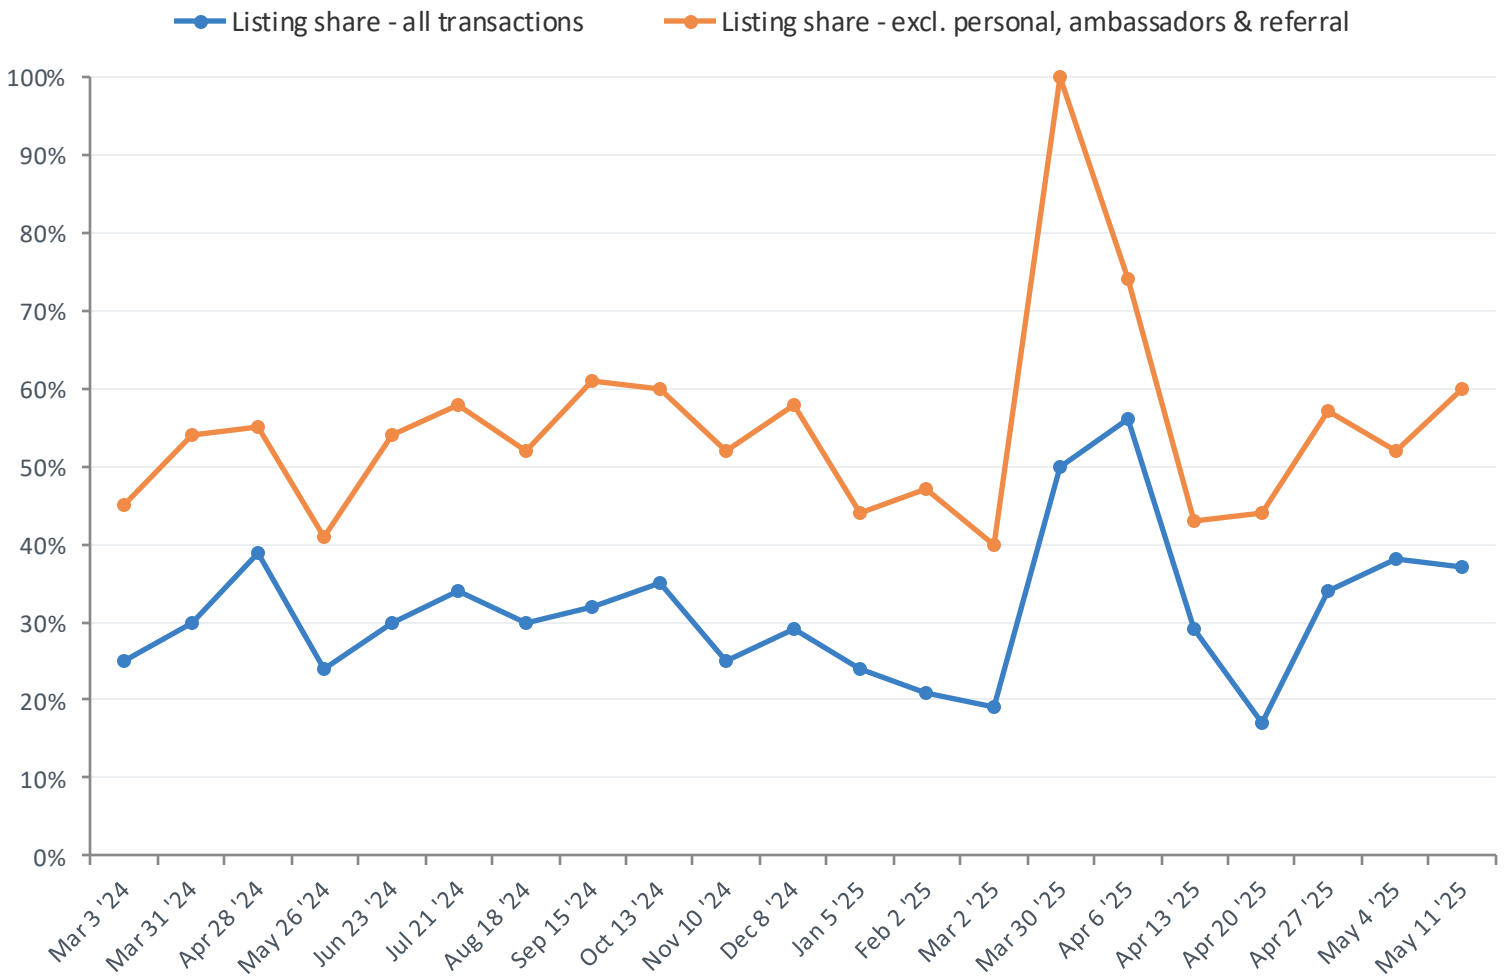

North Star scorecard: conversion is recovering, but share and traffic are weak

Metric	MTD	vs prev.	YTD	vs prev.	Reading
Listing share of transactions	35.42%	**-14.2%**	25%	**-6.9%**	Share eroding even as absolute volume grows
Listing transactions	34	**+30.8%**	187	**+2.2%**	Nawy total is growing faster (96 MTD +52.4%, 742 YTD +9.8%)
Traffic (listing users)	1.2M	**-17.9%**	7.7M	**+96.9%**	Website -26.4% MTD; App +12.1% MTD
Traffic to valid lead	0.32%	**+13.7%**	0.24%	**-46.8%**	MTD improving, but YTD far below prior period
App share of traffic	30.32%	**+36.5%**	22.3%	**-2.2%**	Mix is shifting toward the higher-converting App

MTD = month-to-date vs the previous period; YTD = year-to-date vs the previous period, as shown in the dashboard.

Listing drives 35-60% of transactions once personal, ambassador and referral deals are excluded

- In 14 of 21 periods the listing share was 50% or more in the "clean" view (personal, ambassador and referral deals excluded), so listing is the main non-relationship channel.
- The 50-56% (all) and 100% (clean) spikes on Mar 30 / Apr 6 sit on tiny denominators (6 and 25 Nawy transactions) - treat as noise.
- The latest three weeks are back at 34-38% (all) and 52-60% (clean).
- Per-channel split of listing transactions: App 16-26% and Website 0-13% in recent weeks, Landing Page near 0-5%.

Source: Listing Weekly Report 3 (Looker Studio), data through May 19, 2025. Pre-Mar 30 points are 4-week blocks, later points are weekly.

The App delivers 57% of valid leads from 22% of traffic - the Website is mostly volume

4.7x

App vs Website conversion YTD (0.61% vs 0.13%); 4.0x MTD (0.68% vs 0.17%)

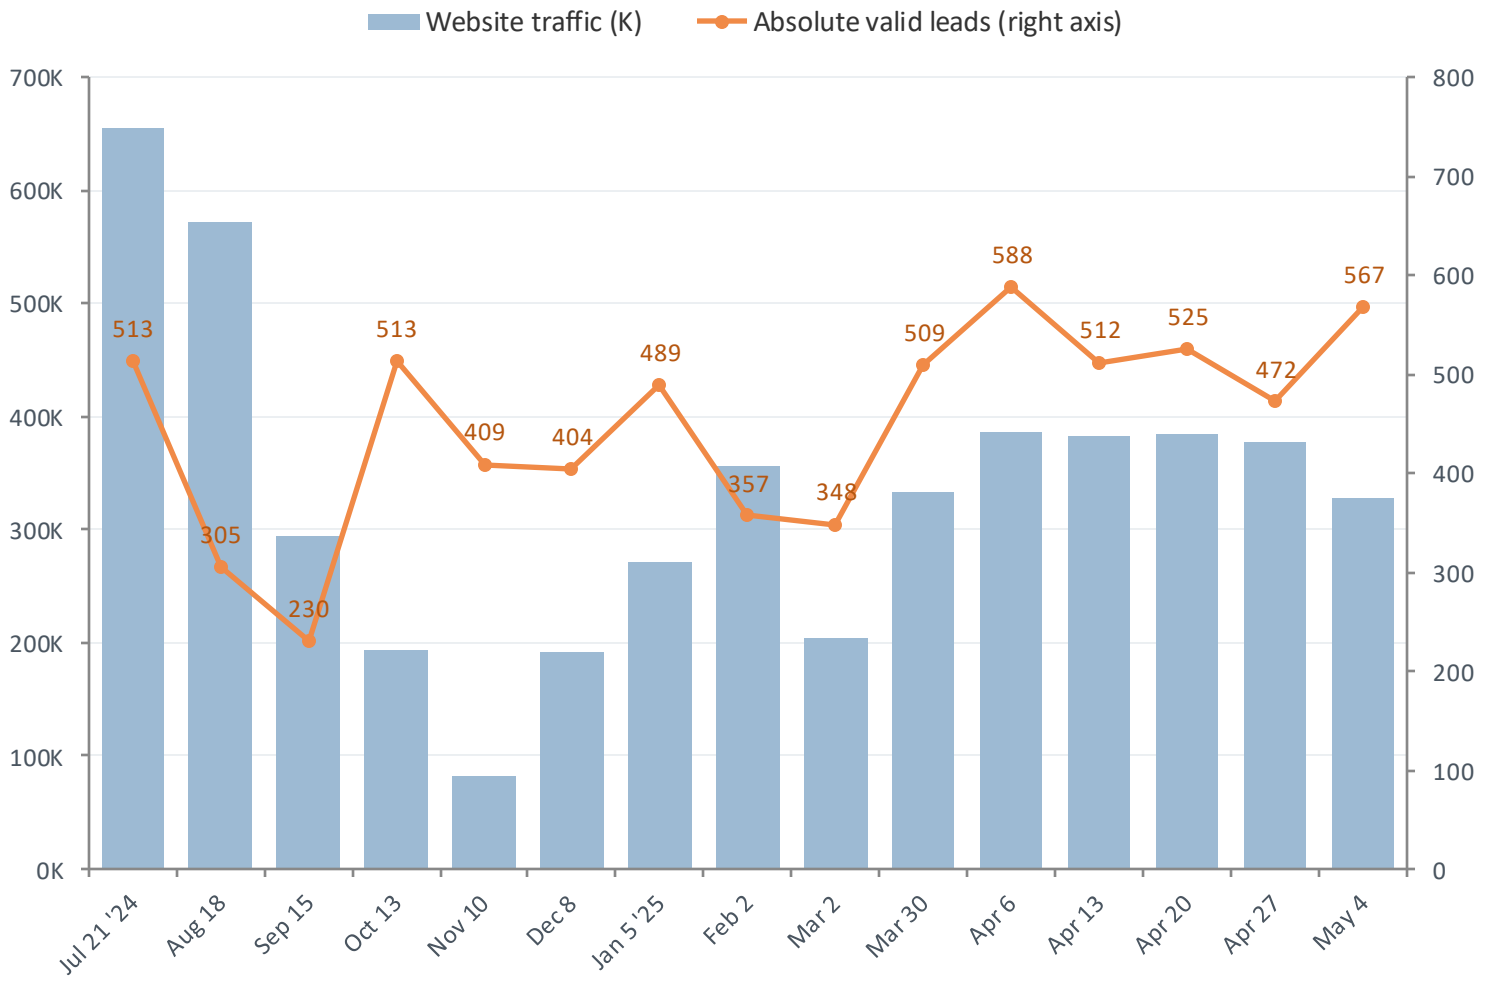

3.8x

App vs Website transaction share per user MTD (20.8% of transactions from 349K users vs 12.5% from 801K)

Landing Page: 147 valid leads YTD, traffic only 5.3K (-98%), too small to steer decisions. Valid leads: Website 7,839, App 10,567, total 18,553.

Source: Listing Weekly Report 3 (Looker Studio), data through May 19, 2025. Pre-Mar 30 points are 4-week blocks, later points are weekly.

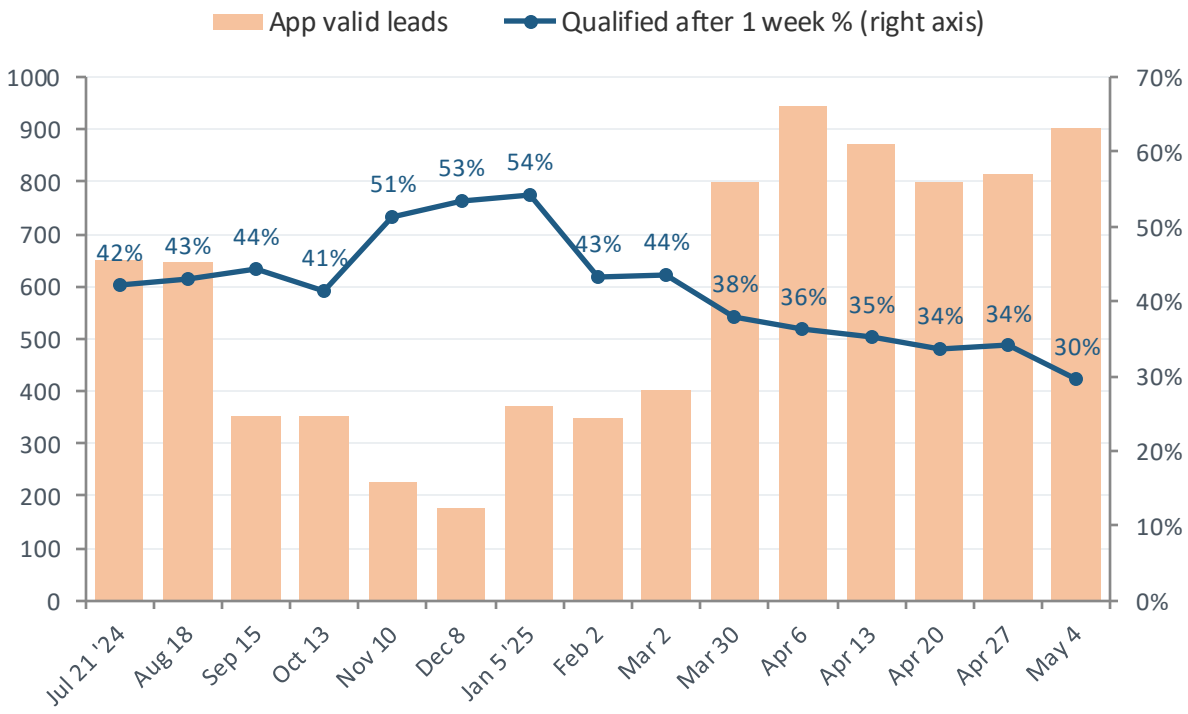

Website: traffic fell 50% since July while valid leads rose 11% - more visits do not mean more leads

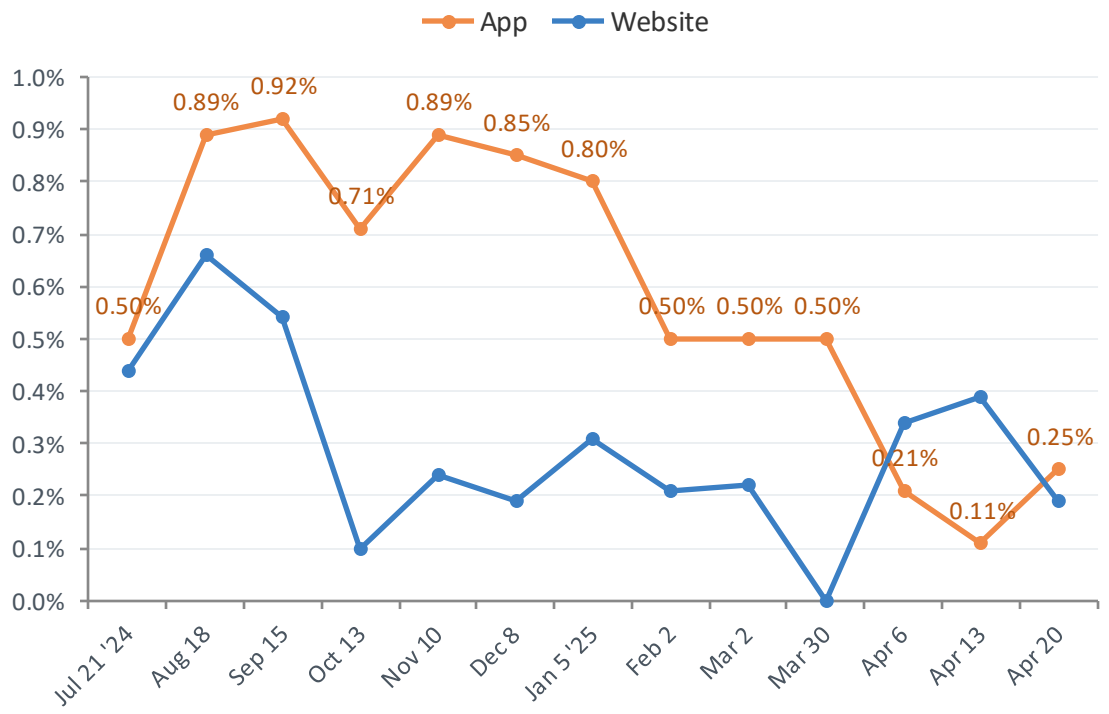

- Jul 21 (655.6K visits) produced 513 valid leads; May 4 (328.8K visits) produced 567.
- Valid-lead rate swings from 0.05% (Aug 18, 571K visits) to 0.49% (Nov 10, 83K visits): peak volume was low-intent traffic.
- 88% of May 11 website active users are paid (153.7K paid vs 20.5K unpaid).
- Google Search users fell from about 2.4K (Apr 6) to 1.0K (May 11) while Pmax stayed at 2.4-2.9K.

Source: Listing Weekly Report 3 (Looker Studio), data through May 19, 2025. Pre-Mar 30 points are 4-week blocks, later points are weekly.

App: lead volume has more than doubled since January, but qualification and contraction are falling

Leads +142%

App valid leads 373 (Jan 5) to 904 (May 4); qualification 54.2% to 29.5%.

Contraction -72%

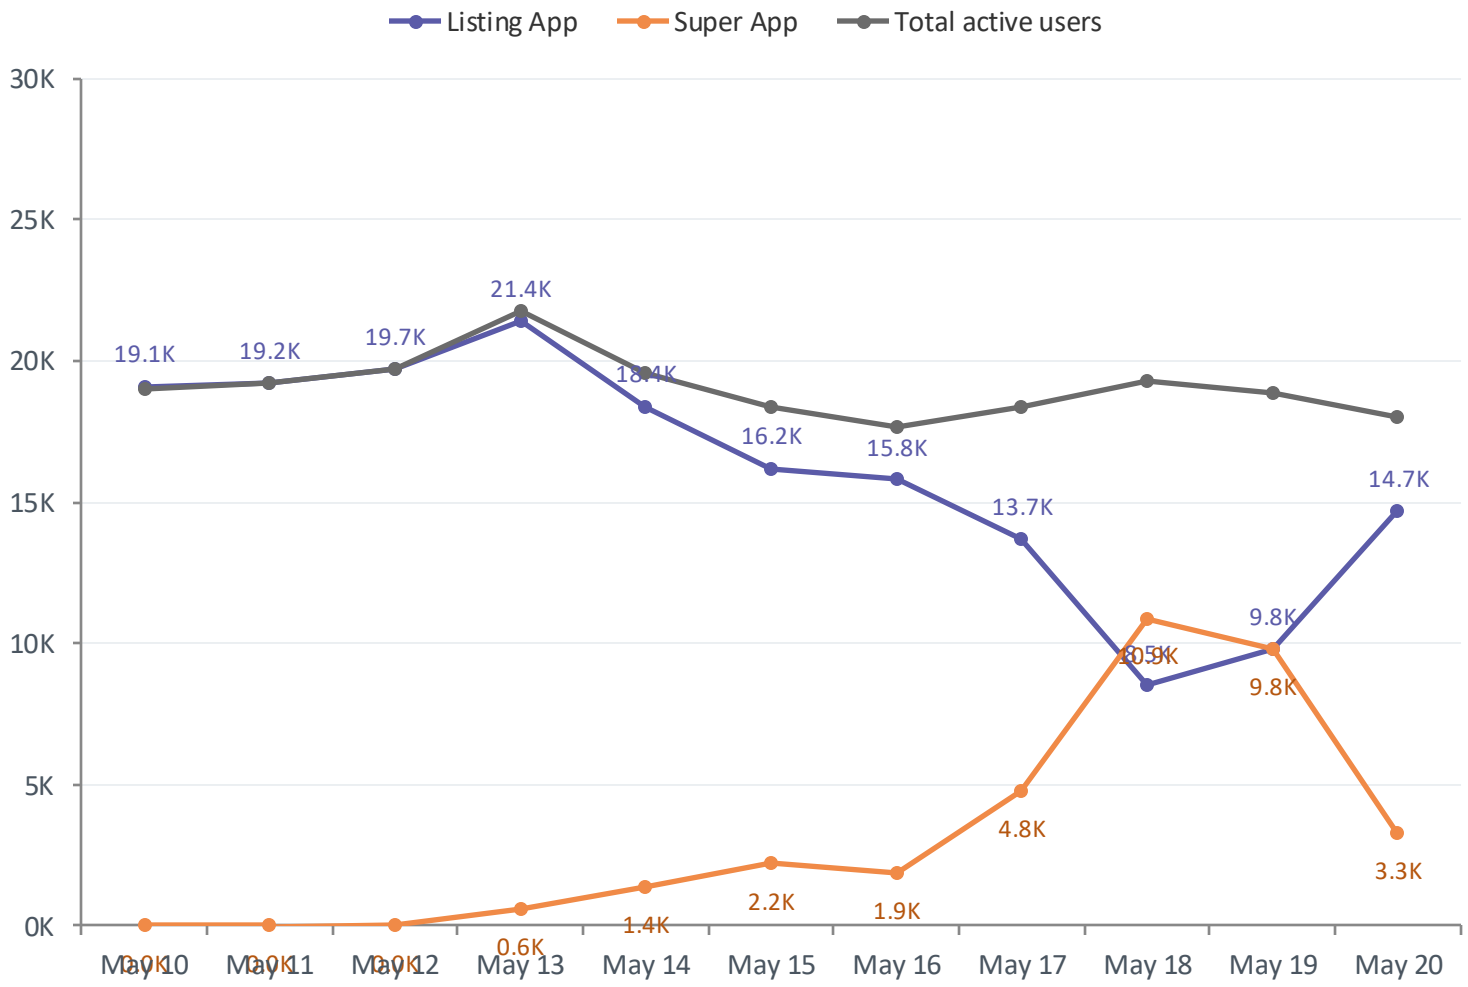

App 4-week contraction rate 0.89% (Aug 18) to 0.25% (Apr 20); meetings 6.4% to 4.1% since Jan.

Website holds up per lead

Latest matured cohorts: Website contraction 0.19-0.39% vs App 0.11-0.25%. Right chart: 4-week contraction, matured cohorts only.

Source: Listing Weekly Report 3 (Looker Studio), data through May 19, 2025. Pre-Mar 30 points are 4-week blocks, later points are weekly.

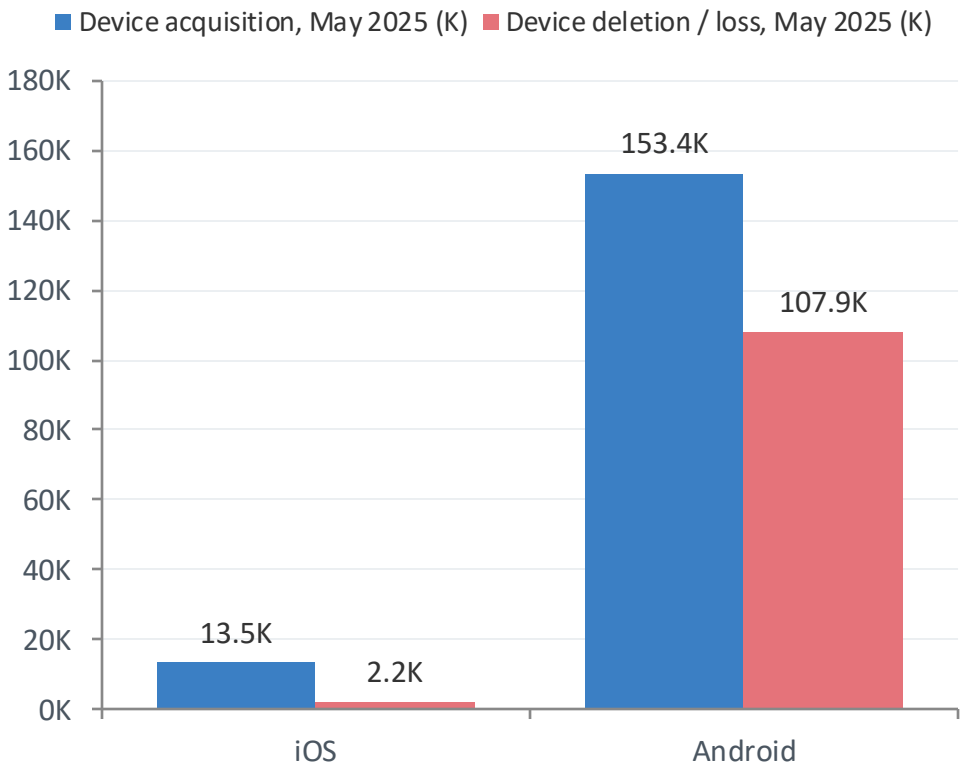

Super App launch: users are migrating from the Listing App, not adding to total active users yet

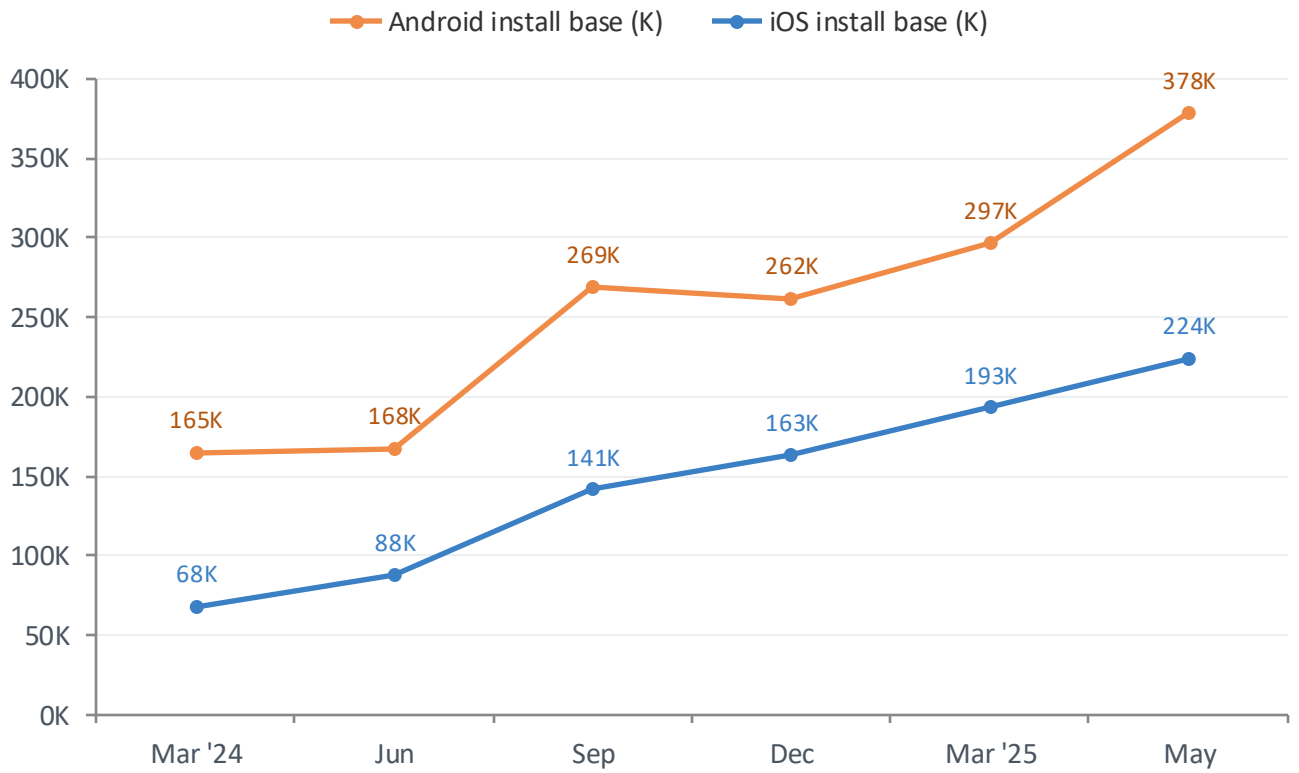

- Total active users: 21.8K at launch (May 13) vs 18.0K on May 20 - flat to down.
- Listing App fell from 21.4K to 8.5K by May 17 while Super App climbed to 10.9K: the two lines mirror each other.
- The Properties vertical is the biggest in the Super App (about 2.6K daily users, May 19-20), ahead of Shares (about 1.7K) and Nawy-now (1.2K).
- Only 8-10 days of data and the last point is probably a partial day: this is a hypothesis to confirm, not a conclusion.

Source: Listing Weekly Report 3 (Looker Studio), data through May 19, 2025. Pre-Mar 30 points are 4-week blocks, later points are weekly.

Android carries the install base but loses 7 of 10 installs; iOS is smaller and far stickier

Deletion ratio

iOS 16% vs Android 70% of May acquisitions.

Install base

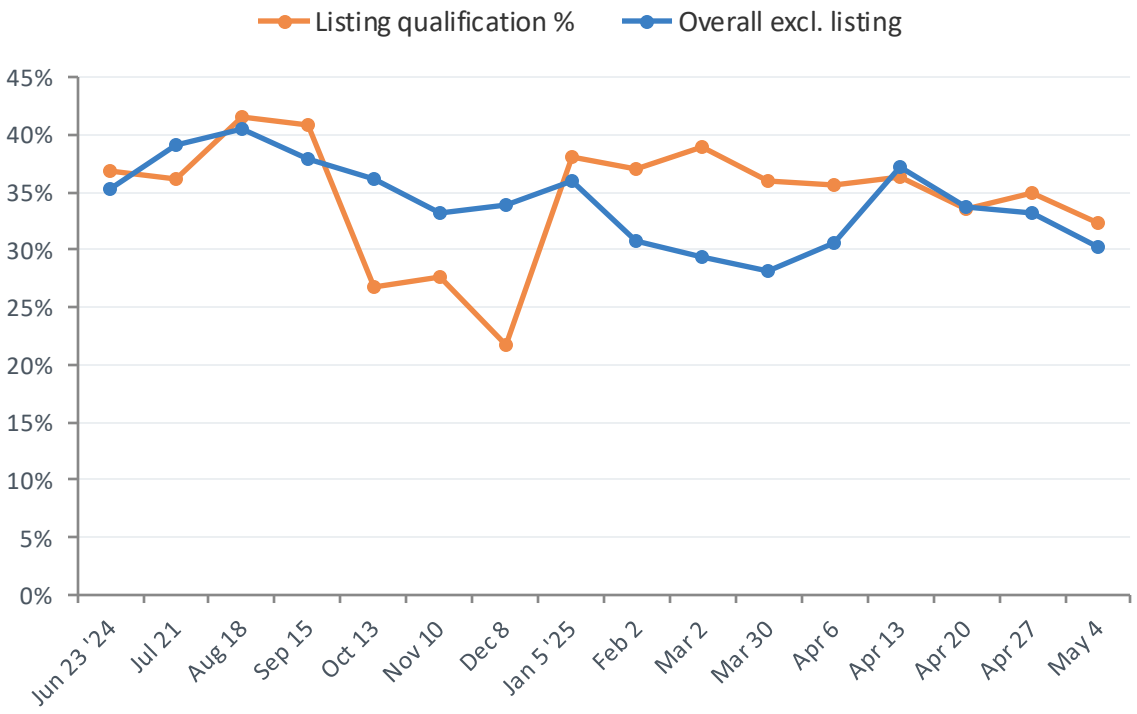

Android 377.8K (+11.7% Apr-May) vs iOS 224.2K (+5.3%).

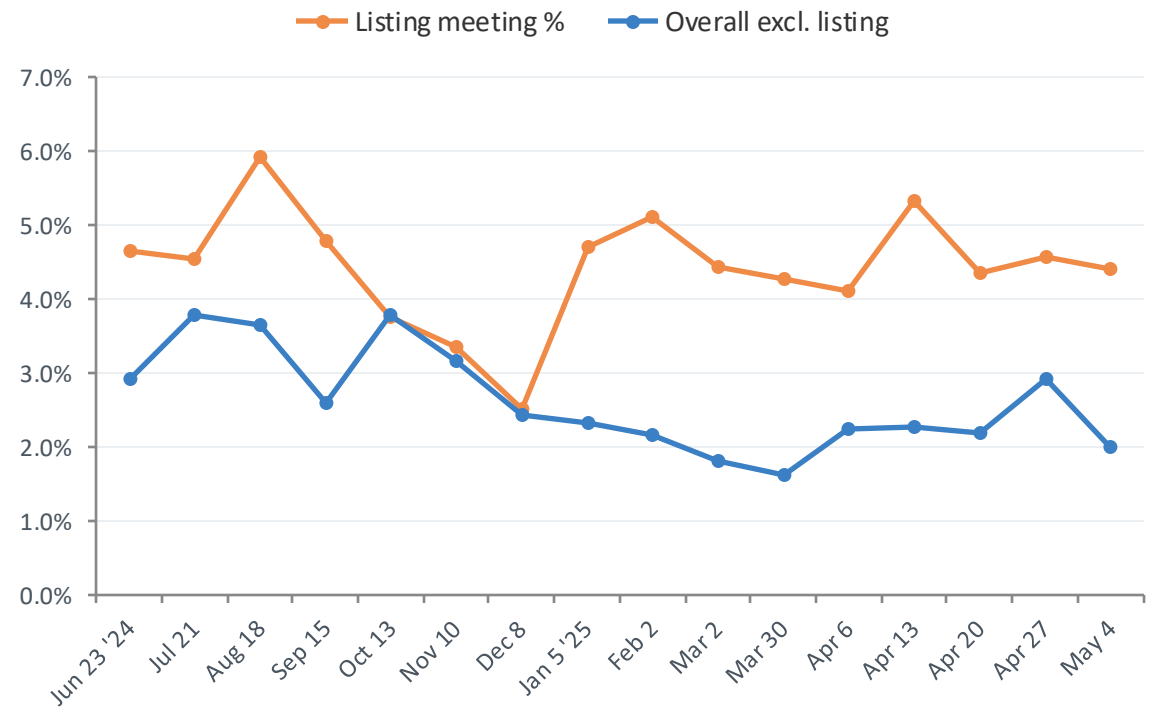

Weekly adds

Android 62.6K vs iOS 5.3K acquisitions (week of May 12).

Source: Listing Weekly Report 3 (Looker Studio), data through May 19, 2025. Pre-Mar 30 points are 4-week blocks, later points are weekly.

Listing leads qualify slightly better and reach meetings 1.7x as often as other Nawy leads

Qualification after 1 week

Listing 35.26% vs 33.27% for the rest of Nawy (+2 pts overall).

Meetings after 1 week

Listing 4.32% vs 2.53% (1.7x). The Dec 8 dip (2.50%) was a one-off low.

Contraction after 4 weeks

Listing 0.17% vs 0.12% (1.4x); WFA is level at 0.26% vs 0.27%.

Source: Listing Weekly Report 3 (Looker Studio), data through May 19, 2025. Pre-Mar 30 points are 4-week blocks, later points are weekly.

Six data issues limit how much we can trust the weekly read-out

1

Two broken dashboard sections

Nawy transactions breakdown and the Valid / Qualified leads by channel pages fail with a dataset configuration error, so there is no channel-level lead view.

2

Conflicting conversion numbers

Dec 8: 0.13% on the Conversion page vs 0.32% on the Funnel page; YTD 0.24% vs 0.31% grand total. Different traffic and period definitions.

3

Landing Page is unreliable

Traffic of 31 to 3.3K per week; Jan 5 shows leads at 136% of traffic. Percentages on tiny samples mean nothing.

4

Granularity and taxonomy changes

4-week blocks switch to weekly on Mar 30. App "Google" users drop from 193.5K to 61K on that date while "App installs" appears - looks like relabeling.

5

Immature cohorts

May 4 and Apr 27 show 0.00% WFA / contraction because 4 weeks have not elapsed. Do not read as a decline.

6

Inconsistent date windows

Dashboard says updated to May 19 but filters end May 10, 17 or 18 depending on the page.

Source: Listing Weekly Report 3 (Looker Studio), data through May 19, 2025. Pre-Mar 30 points are 4-week blocks, later points are weekly.

Recommendations: protect lead quality, stop buying empty Website volume, and fix measurement

#	Action	Why (evidence)	Metric to watch	Priority
1	Audit the App "valid lead" definition and App-install campaigns; add a qualification gate	Qualification 54% to 30%, contraction -72% while leads +142%	Qualified leads and cost per qualified lead by channel	High
2	Cap Pmax volume; shift budget toward Search and high-intent Website audiences; test landing page CRO	Valid leads flat at about 500 for 330K-650K visits; 88% of Website users are paid	Valid leads per 1K visits, Search vs Pmax users	High
3	Report Listing App + Super App combined; instrument listing journeys in the Properties vertical	Total active flat after launch; Listing App -60% in 4 days	Combined active users, listing leads per vertical	High
4	Fix the 2 broken pages; unify the conversion definition; flag immature cohorts and set a minimum sample for Landing Page	Conflicting 0.13% vs 0.32%; 0.00% cohorts; leads at 136% of traffic	Dashboard error count, single conversion metric	High
5	Investigate Android churn (onboarding, install source, app size) and compare iOS vs Android lead quality	Android deletes 70% of May installs vs 16% on iOS	Deletion ratio, 7-day retention by OS	Medium
6	Prioritise follow-up SLA on listing leads and rebuild listing share through the App	Listing meeting rate 4.3% vs 2.5%; share 25% YTD (-6.9%)	Listing share of transactions, meeting rate	Medium

Source: Listing Weekly Report 3 (Looker Studio), data through May 19, 2025. Pre-Mar 30 points are 4-week blocks, later points are weekly.

Action plan: fix measurement first, then optimise the channel mix

Next 2 weeks

- Repair the 2 broken Looker datasets
- Agree one conversion definition and annotate Mar 30 granularity change
- Mark immature cohorts and hide Landing Page % below a minimum sample

Next 30-60 days

- Pmax cap and Search reallocation test on the Website
- App lead-quality audit and qualification gate
- Combined Listing App + Super App active-user view

Next quarter

- Android retention programme and OS-level lead-quality comparison
- Listing lead follow-up SLA with sales
- Cohort view: valid lead to contraction by channel and campaign

KPIs to track weekly

Listing share of transactions | Valid leads per 1K visits (Website, App) | Qualification % and contraction % by channel (matured cohorts) | Combined App active users | Android deletion ratio

Source: Listing Weekly Report 3 (Looker Studio), data through May 19, 2025. Pre-Mar 30 points are 4-week blocks, later points are weekly.
