EMPLOYEE ATTRITION ANALYSIS

A Star-Schema-Driven People Analytics Review

Prepared by Aliaa Sakr

AGENDA

What We'll Cover

01

The Baseline

How much attrition, and where it concentrates

02

The Overwork Signal

Overtime, travel, and disengagement

03

First-Year Instability

Why the first 1-2 years are the riskiest

04

Under-Investment

Stock options and the pay-tenure mismatch

05

A Measurement Gap

What our performance ratings aren't telling us

06

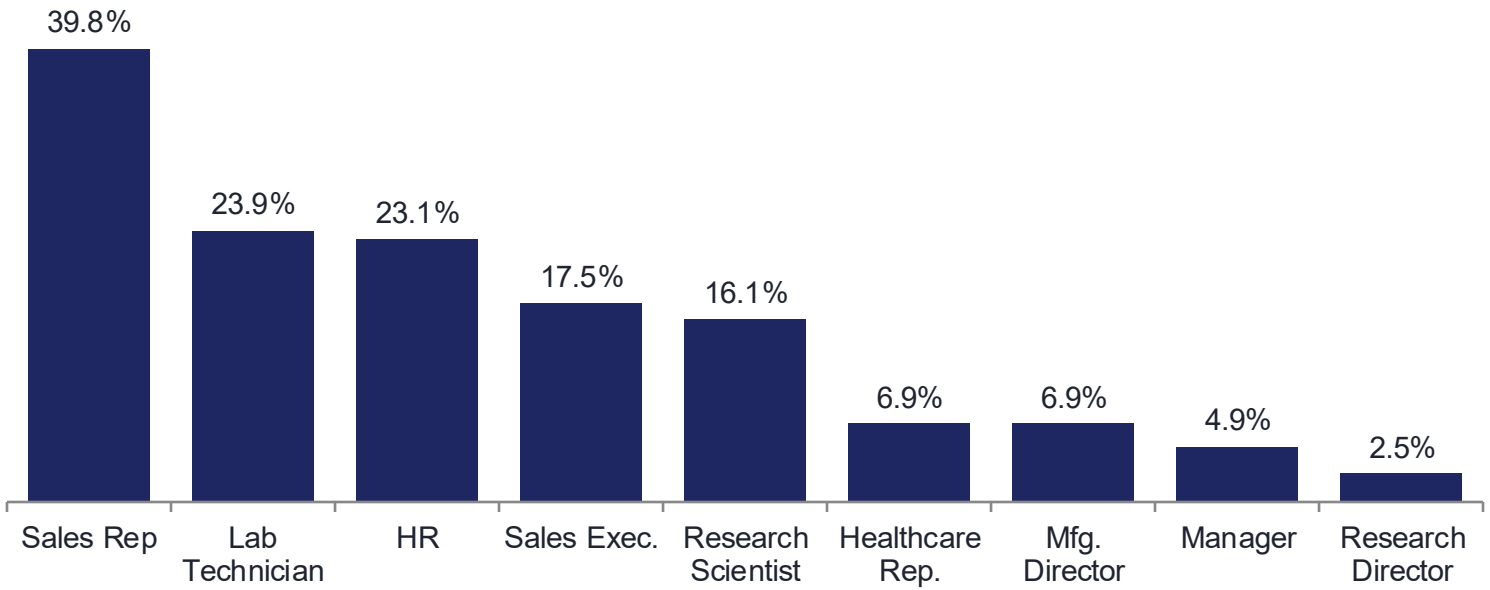

Recommendations

Three actions, ranked by impact

Attrition Isn't Evenly Spread

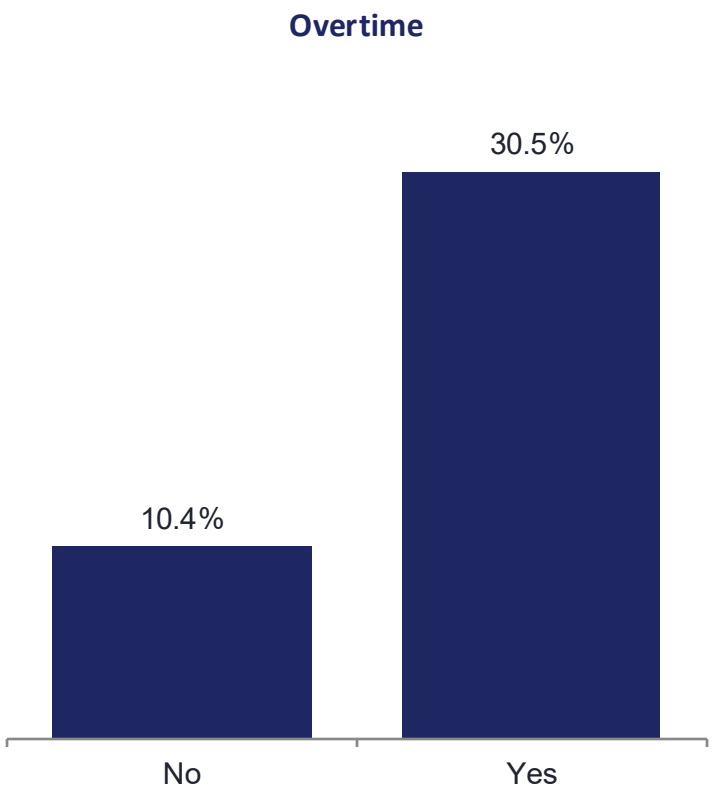

1,470	16.12%	$6,503	7 years
Total Employees	Overall Attrition Rate	Avg. Monthly Income	Avg. Tenure

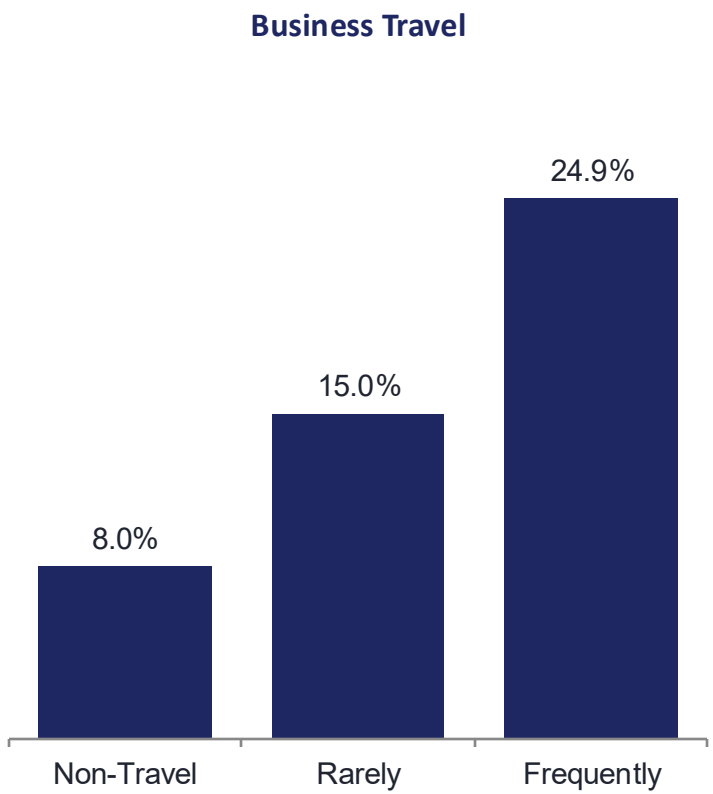

Attrition Rate by Job Role

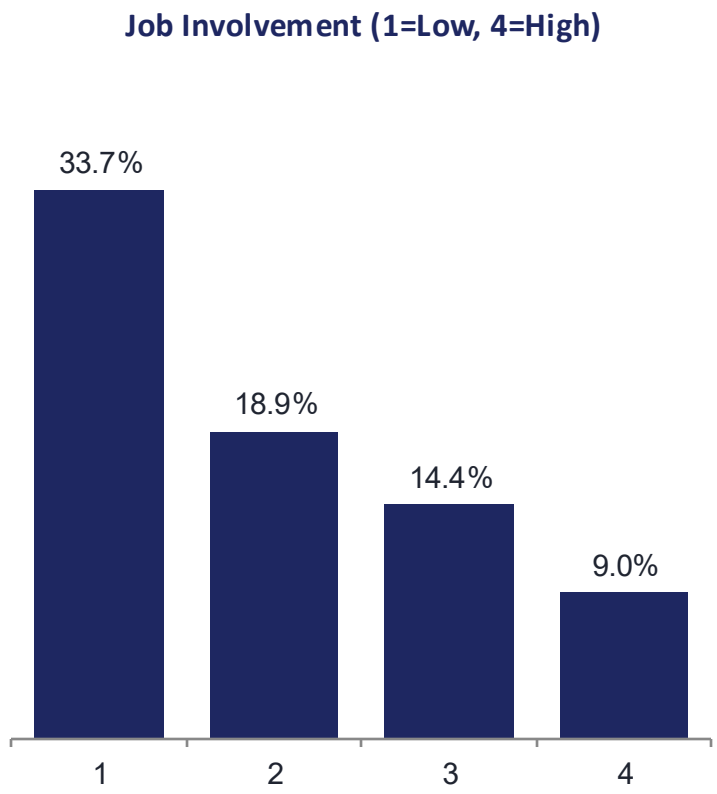

Sales Representatives leave at nearly 40%, almost 2.5x the company average, and the single largest outlier in the dataset.

Behavioral Attrition Prediction

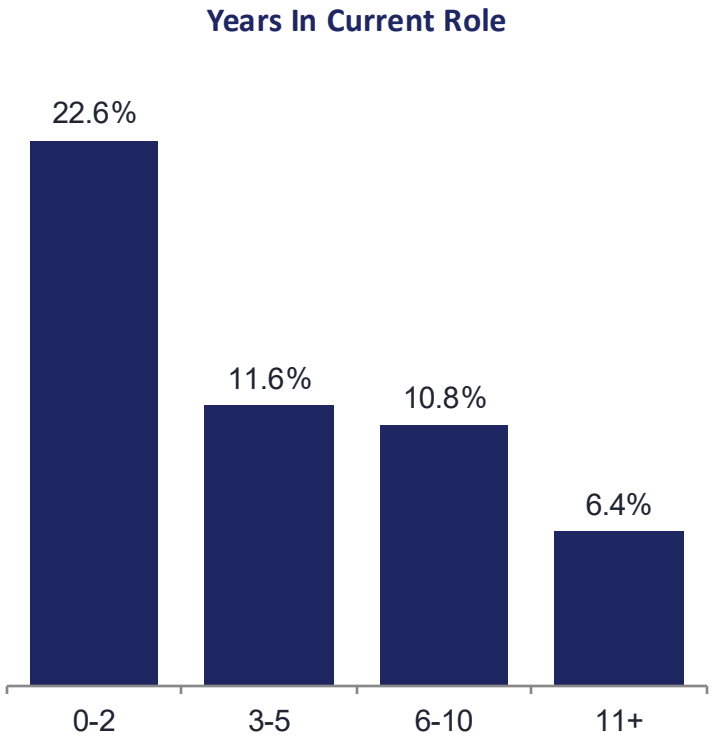

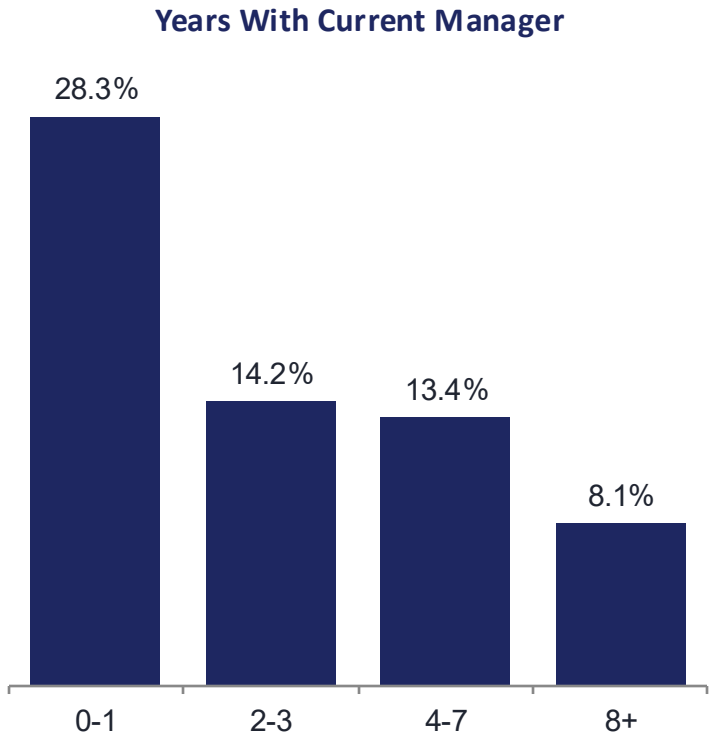

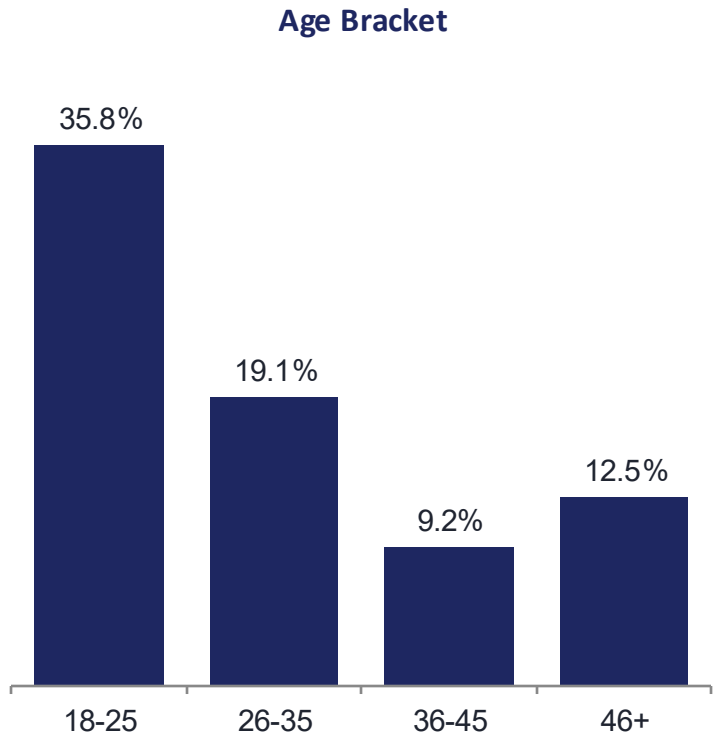

Overtime nearly triples attrition risk (30.5% vs 10.4%). Frequent travelers and disengaged employees show the same pattern.

The Riskiest Window Is Early On

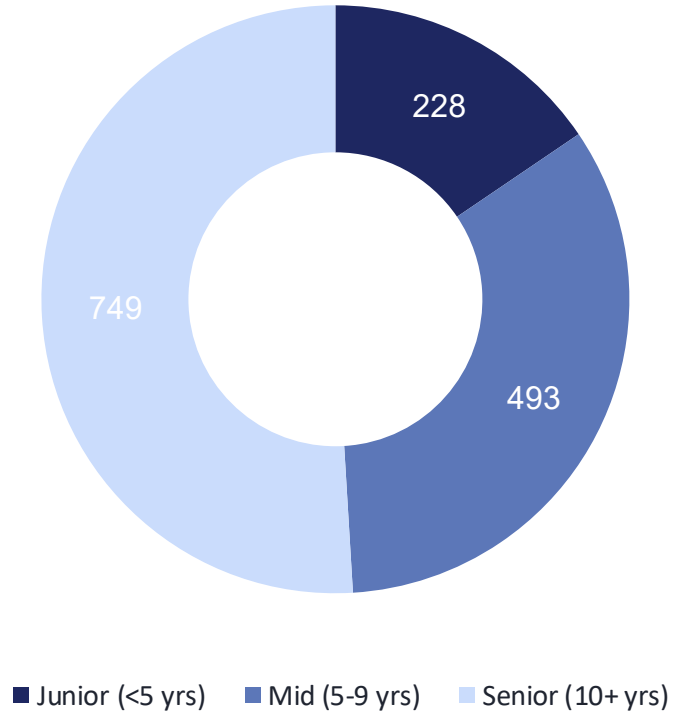

New to a role, new to a manager, or early in a career, all three show the same steep drop-off after year two.

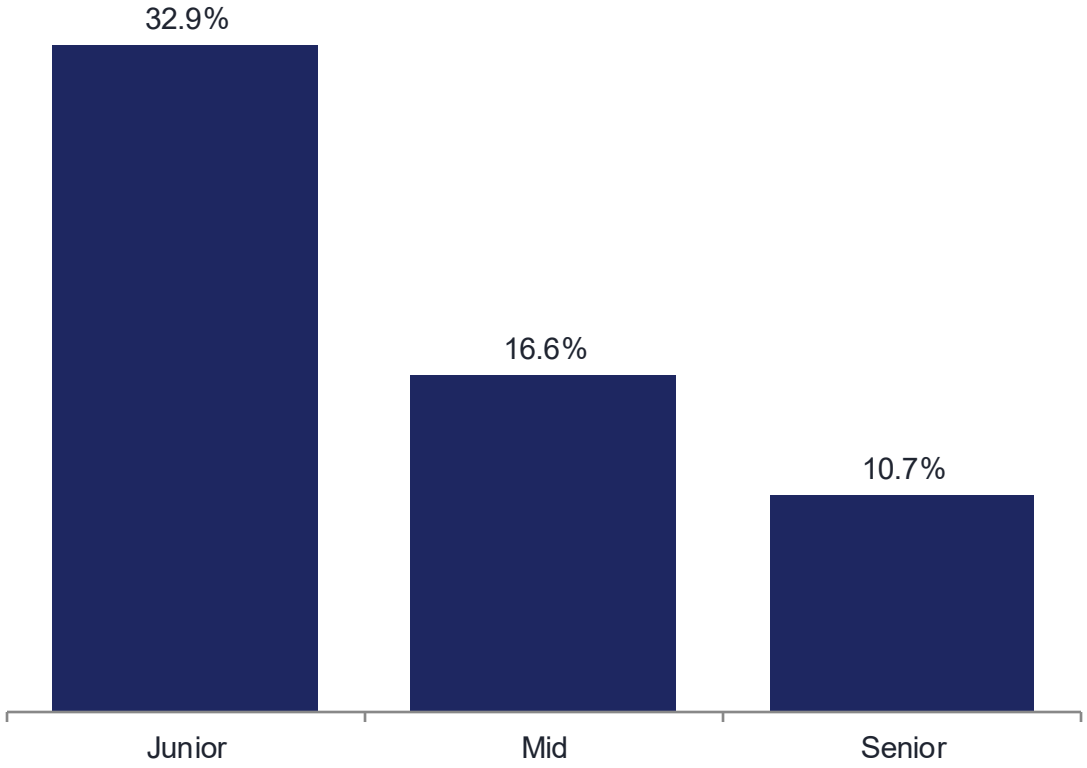

EXPERIENCE SEGMENTATION

Junior Employees Are the Highest-Risk Group

Headcount by Experience Level

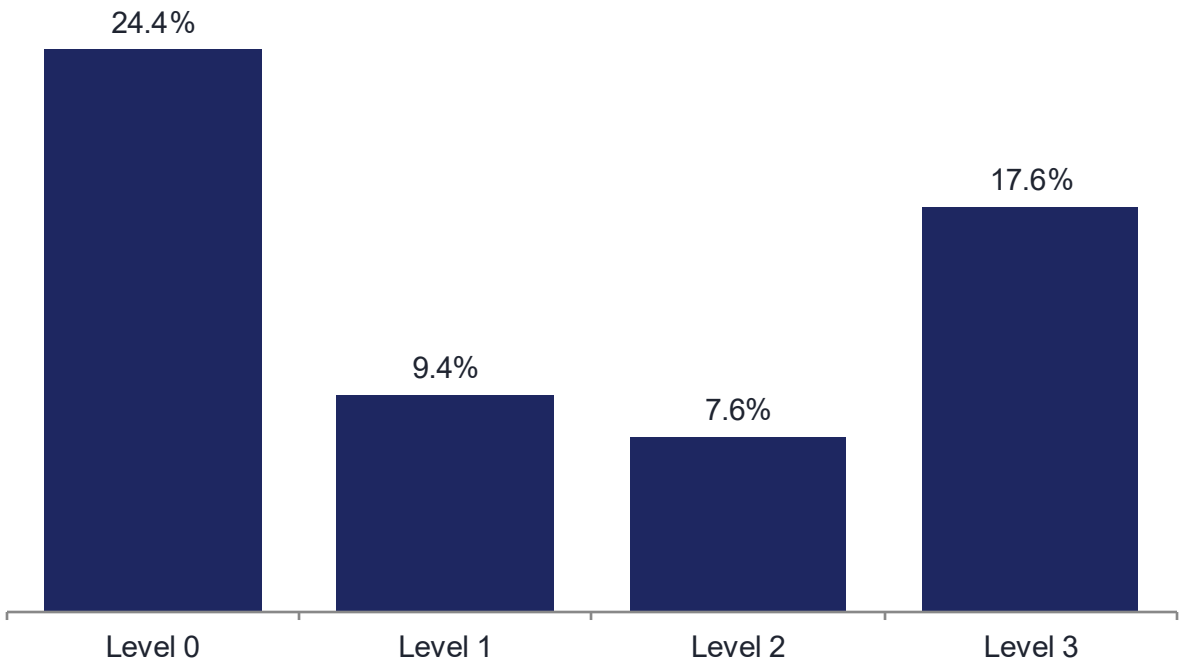

Attrition Rate by Experience Level

Equity Stake Matters More Than Raise Size

Attrition Rate by Stock Option Level

122

employees have 5+ years tenure but sit in the bottom income quartile, their attrition rate is 19%, above the company average.

No meaningful gender pay gap found; average income is nearly identical across genders at every job level. Ruled out as a driver.

Zero stock options correlates with ~3x the attrition risk of holding any equity stake.

05 - A MEASUREMENT GAP

Performance Ratings Aren't Differentiating Anyone

84.6%

of employees rated exactly "3"

15.4%

rated "4“, the only other score used

0%

of employees ever rated 1 or 2

Correlation with Attrition: essentially none
Correlation with Salary Hike: strong

The rating scale isn't differentiating employees, yet it directly drives salary hike decisions, meaning pay increases may not track real performance variation.

06 - RECOMMENDATIONS

Three Actions, Ranked by Impact

1	**Reduce overtime & travel load in high-risk roles**	Sales Reps (39.8%) and frequent travelers (24.9%) show the highest attrition in the company.	*Audit workload in Sales; cap travel frequency where feasible.*
2	**Formalize first-year & new-manager onboarding**	Attrition peaks at 22-28% when an employee is new to their role or manager, then drops sharply after year two.	*Structured check-ins through the first 12 months.*
3	**Expand stock option eligibility for junior staff**	Zero stock options correlates with 24.4% attrition vs under 10% with any equity stake.	*Pilot equity eligibility at Job Level 1 in high-turnover roles.*

Bonus: revisit the performance rating scale - with 85% of employees rated identically, it isn't giving managers a usable signal, and it currently drives salary hike decisions.

Thank You
