BRANDSHOP

Measurement plan and tracking design

How a brand-dedicated shop on a retailer’s website and app was set up to be measured, from the metrics to the events behind them

Disclaimer: all logos, names, and figures shown have been masked, removed, or replaced with sample data to protect confidentiality.

Eleven metrics, split by who sees them

Shared with brand partners

Conversion rate
vs total brand conversion and ad banner clicks

Traffic
users landing on the shop (30,000 a month forecast)

Dwell time
vs the brand's category page

Steps to place order
vs ordering from the homepage

Cross-selling
within the same brand

Internal tracking only

Bounce rate
vs listing and search pages

Time to place order
vs ordering from the homepage

Repeated visits
vs listing and search pages

Add-to-cart rate
vs banner clicks

ROI
vs ads, and effect on other ad products

Attachment rate
accessories as a share of total sales

Five events, four properties

Event	Fires when	Properties
bs_pageload	any brandshop page loads	brand
bs_pageend	a user reaches the end of a page	brand
bs_view_section	a content section is viewed	brand, section name, order
bs_view_item	a component is viewed	brand, section, component, order
bs_click	a component is clicked	brand, section, component, order

In Amplitude the click and section-view events appear as bs_contentclick and bs_sectionview.

From brand-specific names to one reusable schema

First plan

- Event names carried the brand and category, for example Brandshop_BrandName_Category_View
- Each new brand or category meant new events
- A promo click led to an item page with no view event
- Some clicks fired no screen view afterward

Final design

- Five generic events for every brand shop
- Brand, section, component, and order stored as properties
- One dashboard works for any brand through a filter
- Section and item views close the journey gaps

From events to the KPIs on the dashboards

Bounce rate
Page load to content click

Product CTR
Page load to product view

Conversion rate
Page load to purchase

Also tracked: time to first click, dwell time, scroll depth by section, share reaching the page end, and the most frequent user paths.

Plan vs the first launch

30,000

monthly visits forecast

25,019

sessions in the first 30 days (14 Oct to 12 Nov 2024), at about 1,650 a day since 1 Nov

KPI	1-12 Nov average	Proposed target
Traffic per day	1,655	2,000 or more
Bounce rate	28%	25% or less
Product CTR	39%	45% or more
Time to click	7.7 s	7 s or less
Conversion	1.3%	2% or more

The new targets come from the launch review.
